THE MEMORY OF
MAX MULLER.

MAX MULLER.
PREFACE.

Many of the papers collected together in this volume originally appeared in the Brahmanadina and in the Indian Review, while some others were delivered as lectures or written as papers by the gentlemen under whose names they appear. They have not been arranged with a view to any completeness of presentation, but it is hoped that the various aspects of the subject presented herein will stimulate the reader to an appreciation and study of the eternal principles of the Vedanta.

The publishers desire to express their obligations to Mr. M. C. Alasingaperumal proprietor of the Brahmanadina for having kindly permitted several of the articles from his journal to appear in this volume.
FOREIGN

APPRECIATIONS OF THE VEDANTA.

Prof. Max Muller:—I spend my happiest hours in reading Vedantic books. They are to me like the light of the morning, like the pure air of the mountains,—so simple, so true, if once understood.

"The Upanishads are the...sources of...the Vedanta philosophy, a system in which human speculation seems to me to have reached its very acme."

Victor Cousin:—"When we read with attention the poetical and philosophical monuments... of India,... we discover there so many truths, and truths so profound, and which make such a contrast with the meanness of the results at which the European genius has sometimes stopped, that we are constrained to bend the knee before that of the East, and to see in this cradle of the human race the native land of the highest philosophy."
Schopenhauer:—"From every sentence (of the Upanishads of Vedanta) deep, original, and sublime thoughts arise, and the whole is pervaded by a high and holy and earnest spirit. In the whole world there is no study so beneficial and so elevating as that of the Upanishads (the Vedanta). (They) are products of the highest wisdom. It is destined sooner or later to become the faith of the people."

Dr. Paul Deussen:—"The Vedanta is, now as in the ancient time, living in the mind and heart of every thoughtful Hindu. . . . This fact may be for poor India in so many misfortunes a great consolation; for the eternal interests are higher than the temporary; and the system of the Vedanta, as founded on the Upanishads and Vedanta-sutras and accomplished by Sankara's commentaries on them,—equal in rank to Plato and Kant—is one of the most valuable products of the genius of mankind in its search for the eternal truth.

Dr. Goldstucker:—"The Vedanta is the sublimest machinery set into motion by oriental thought."
THE VEDANTA IN OUTLINE.
BY PANDIT SITANATH TATTVABHUSHAN.

TWO MEANINGS OF 'VEDANTA.'

The term 'Vedanta' is a compound of 'Veda' and 'anta' (end), and means, in its primary signification, the latter part of the Veda or Vedas. The Vedic literature is divided by the expounders of the Vedas into two main kandas or sections, the first or purva portion being called the karma-kanda, that is, the section treating of karma, actions or duties; and the second, anta or uttara portion the jnana-kanda, the section on knowledge. The division is not clearly represented by distinct books or even chapters of the Vedas; but roughly speaking, the Mantras and the sacrificial portions of the Brahmanas represent the karma-kanda, and the treatises called Upanishads, attached mainly to the Brahmanas, represent the jnana-kanda. This jnana-kanda of the Vedas is the Vedanta in the original sense of the word. As a part of the Veda, the Vedanta is sruti or scripture. As sruti or scripture, therefore, the Vedanta is identical with the Upanishads. The use of the term 'Vedanta' in this sense will be found in the Upanishads.
themselves, for instance, in the *Mundakopanishad* III. 2.6 and the *Svetásvataraopanishad*, VI. 22. Sankaráchâryya, the greatest authority on the *Vedánta*, uses the word in this sense everywhere in his writings. However, the word ‘anta’ in ‘Vedánta,’ from meaning ‘end’ or ‘latter part,’ came gradually to mean ‘conclusion,’ ‘gist’ or ‘purport.’ The composers of the Upanishads claimed that they had discovered the gist or purport of all Vedic teaching in the knowledge of the Absolute, of whom the gods worshipped by the authors of the *Mantras*, as well as all objects in creation were, they taught, names, forms or relative manifestations. The final end of all Vedic disciplines were, they thought, union with Brahman, the Absolute Being. In this latter sense, therefore, in the sense of the gist or purport of the Vedas, it was the Upanishads, again, which were called the ‘Vedánta’ or ‘Vedántas.’ But the term came gradually to mean something quite different from, though closely related to, the Upanishads. As the Upanishads treated of a large variety of subjects, both essential and non-essential to the spiritual life, and as the teachings of the different treatises were apparently, if not really, conflicting, it became necessary to have systematic statements of the
main doctrines taught in them,—statements backed by reasonings where necessary, and reconciling apparent discrepancies in the original teaching. Thus arose what is called the Vedânta Philosophy, that is the Philosophy of, or based on, the Vedânta or Upanishad. This philosophy, or the body of aphorisms which is its chief exponent, oftner goes by the name of 'Vedânta' than the Upanishads, the original Vedântas and the basis of all later Vedântic teaching. The distinction, however, between the Vedânta as sruti or scripture, and the Vedânta as Darshana or Philosophy, must never be lost sight of.

**THE VEDANTA-SRUTI.**

The Vedânta as scripture consists, as I have said, of the Upanishads. Their traditional number is one hundred and eight; but modern scholars have found out that there are no fewer than one hundred and fifty bearing the name. All of them, however, are not genuine parts of the Vedas, nor do all truly represent the spirit of the original Vedântic teaching. Practically twelve are recognised as forming the Vedântic canon and the basis of the Vedântic Philosophy. They are the Isa, Kena, Katha, Prasna, Mundaka, Mandukya, Taittiriya, Aitareya, Chhandogya, Brihadaranyaka, Kaushitaki and Svetasvatara Upanishads. Of these
the Aitareya and the Kaushitaki belong to the Rigveda; the Kena and the Chhandogya to the Samaveda; the Isa and the Brihadaranyaka to the Sukla or white Yajurveda; the Katha, Taittiriya and the Svetasvatara to the Krishna or Black Yajurveda; and the Prasna, the Mundaka and the Mandukya to the Atharvaveda. The other Upanishads, such as the Ramatapani, the Gopalatanjaniya and Nrisinhapatapani, are mostly 'Sampradayika,' i.e., sectarian, and not content, like the twelve named above, with teaching of the Infinite and Absolute Being, extol historical or mythical heroes as incarnations of the Deity.

The Vedanta-Darsana.

The most honoured exposition of the philosophy of the Vedânta is the body of aphorisms ascribed to Vyâsa or Bâdarâyana. Bâdarâyana himself is named in these aphorisms as one of several teachers of the Vedântic Philosophy; so that Vedântism as a philosophical system must have existed and been widely taught long before the composition of these aphorisms, however ancient they may be, and possibly there may have been previous compendiums of the Philosophy on which they were based. But as a fact we possess none more ancient than they. Some of the names by which these aphorisms are called deserve to be mentioned
and remembered by the student of the Vedánta Philosophy. They often go by the name of the Vedánta Darsana, though all expositions of the Philosophy of the Upanishads may claim the name. They are called the Uttara Mīmāṃsā, because they are a mīmāṃsā or reasoned exposition of the Uttara or latter part of the Vedas, i.e., of the Upanishads. They are so called in distinction from the Purva Mīmāṃsā ascribed to Jaimini, which expounds the Purva or earlier parts of the Vedas, i.e., the Mantras and the sacrificial portions of the Brahmanas. They are called the Brahma Sutras, aphorisms expounding the nature of Brahman, in distinction from the Dharma sutras or aphorisms expounding the nature of Dharma or duty, the subject matter of Jaimini's work. They are named the Sarvākṣa Sutras or Sarvākṣa Mīmāṃsā, because they treat of the true nature of the Sarvākṣa, the embodied soul. Other names are the Vyāsa Sutras, the Badarayana Sutras, the Vedánta Mīmāṃsā and the Apanishadi Mīmāṃsā. This great work, divided into four chapters and sixteen sections, consists of five hundred and fifty-eight pithy utterances many of which contain the concentrated gist of a great deal of meditation and reasoning. This fact makes the book almost unintelligible without a commentary. Various commentaries on it,
however, are extant, commentaries which represent the various schools of the Vedánta Philosophy. Of these I shall speak later on. Besides the Vedanta Sutras, there are various works expounding the Philosophy of the Upanishads. But they all belong to some particular school or other, and shall be noticed when I come to speak of these schools.

The Three Vedantic Institutes.

Besides the twelve Upanishads, and the Vedanta Sutras, another work, the Bhagavadgita, is held by all Vedántic schools as embodying Vedántic teaching of an unsectarian nature, and this in spite of the apparently sectarian character of the book—in spite of the fact, that Krishna, the incarnation of Vishnu, is therein represented as the Supreme Being. So it has happened that ever since the time of Sankaráchárya, and perhaps since a time anterior to him, the Upanishads, the Vedanta Sutras, and the Bhagavadgita have been held to compose the complete Vedantic canon. They are called the three prasthanas or institutes of Vedantic teaching, the Upanishads being called the Sruti Prasthana or scriptural institute; the Vedanta Sutras the Nyaya Prasthana or logical institute; and the Bhagavadgita the Smriti Prasthana or institute of duty. All the great founders of the various Vedántic schools have commentaries on
these three institutes, and their mutual differences consist in the different ways in which they interpret the fundamental teaching contained in the Prasthanatrayam.

Unsectarian Vedantism.

This fundamental teaching, if it could be gathered from the canonical books without the aid of the founders of the Vedántic schools, or without being biassed by their peculiar views, would be true, unsectarian Vedantism, not identified with the views of any particular Vedántic teacher of later times. But, as a fact, Vedántism, as a system, does not exist in such a pure and unsectarian form in any of its various representations. As I have already said, all the various works in which the philosophy is expounded, belong to some particular school of other. If an independent exposition were now attempted, it would, no doubt, bear the stamp of the expounder's habitual trend of thought and feeling, and would be set down as sectarian. It would perhaps even be identified with the one or the other of the existing schools. Perhaps this is inevitable from the very nature of things. Realism, Idealism, Monism, Dualism, Hedonism, Legalism, Rationalism &c., are not so much opinions identified with particular philosophers as they are phases or stages of thought which commend themselves to the
mind of man according to the peculiarities of his nature and education. The teachings of the Upanishads and the two other Vedântic institutes are so various, representing so many phases and strata of thought, that it is possible to find authority in them for all the forms of speculation named above. I am indeed far from thinking that the principal teachers of Vedântic doctrine were not agreed as to a number of fundamental principles or that the highest teaching contained in the three institutes is not uniform. But I must confess that this highest and uniform Vedântism exists, even in the institutes, not to speak of later works, side by side with a good deal of lower or tentative teaching representing various stages of culture in the teachers. If, however, this latter class of teaching is held by some Vedântic teacher as essential, and embodied in his system as such, his method may be blamed as defective, but the claim of his system to be called Vedântism cannot justly be denied. The difficulty of deducing from the canonical books a system that would be recognised as Vedântism pure and simple, is, therefore, patent. But I shall nevertheless try to enumerate a few principles of a most general nature which are to be found in all Vedântic systems. It is the less difficult to find out some such principles from the fact that though
differing from one another in the interpretation they respectively give of particular Vedântic doctrines, all Vedântic schools are opposed as one uniform system to the other schools of the national philosophy, for instance the Chârvâka, the Buddhist, the Pûrva Mimânâsâ, the Sânkhya, the Yoga, the Nyâya and the Vaiśeshika school. Their points of difference from these schools are points of agreement among themselves. Thus, then, to begin with, the Charvâka doctrine of the material and destructible character of the soul is rejected by all Vedântic schools. The Vedântic doctrine of the soul is that it is immaterial and indestructible in nature. Then, the idealistic or rather individualistic doctrine of certain Buddhist philosophers, the doctrine that there is no world independent of the ideas of individual minds, is opposed by the Vedânta. It gives to Nature an existence independent of the individual soul, however dependent that existence may be on the Universal Soul. The same opposition is offered to Buddhist Sensationalism, the doctrine that there is nothing more real and permanent than perishing sensations, the Vedântic doctrine being that the Self, with its permanent ideas, is an unchangeable witness of the past and the present. So, in opposition to the Sânkhya Dualism, the doctrine of Purusha and
Prakriti as the dual cause of the world, the Vedântic teaching is that the cause of the world is one, namely Brahman, the Supreme Intelligence, who is both the regulating or occasional (nimitta) cause and the material (upâdâna) cause of the universe, having made the world out of his own will or nature without the help of any extraneous substance. In this respect the Vedânta is opposed to the Vaiseshika conception of eternal, uncreated atoms as the material cause of the Universe. Then again, the Yoga doctrine of a God existing apart from the individual soul is rejected by the Vedânta, the Vedântic doctrine of the relation of the individual and the universal self being that the Universal exists continually in the individual, sustaining and regulating it. In the same manner the Nyâya doctrine of Nature, God and the individual soul as independent realities, is refuted by the Vedânta as inconsistent with the infinitude of God, the Vedântic teaching being that everything is comprehended in the Divine existence. In practical matters, the Vedânta holds, in opposition to the Purva Mimansa, that ceremonial observances have no absolute value, their importance consisting only in their being disciplines teaching the mind to look beyond the immediate objects of sense and purging it of the grosser desires. The Vedânta
attaches great importance to devout meditations on Brahmān, of which the Upanishads contain numerous samples, and the Bhagavadgīta lays special stress on the culture of bhakti, the reverential love of God. In brief, karma or duty devoutly and disinterestedly performed, and upasana or devout meditation carried on with bhakti, leading to jnana, the knowledge and constant consciousness of the Supreme Being, constitute the ethical scheme of the Vedānta in its essence. The supreme end of existence is indissoluble union with Brahmān, which may be realised in this life or another according to the quality of one’s spiritual efforts. As to the future life, the Vedānta teaches that the individual soul, which is an eternal, uncreated part or manifestation of the Supreme Soul, goes through a countless series of incarnations till it is freed from the fetters of physical embodiment and blessed with conscious union with God. These fetters are, the Vedānta teaches, five in number, and are called koshas or sheaths, since they hide from the soul, in its ignorant state, its true spiritual essence. In the various stages of culture previous to the highest enlightenment, the soul ignorantly identifies itself with one or another of the following: the first or the most gross, the annamaya kosha or the gross material body; the second in order of
grossness, the pranamaya kosha or the vital powers
the third, the manomaya kosha or the sensorium;
the fourth, the vijnanamaya kosha or the under-
standing; and the fifth, the anandamaya kosha or
the pleasurable emotions. Beyond these, but
illuminating all with the light of its consciousness,
is the pure self, whose true nature and relation to
God must be realised before moksha or liberation
can be attained. However, having a subtler body
than the visible, namely that consisting of the
subtler sheaths, it is easy to see how the soul passes
at death from one body to another or from one
region of the universe to a higher or lower one.
As to the details of the future life, the Vedanta
conceives three very different states for the three
classes into which it divides all moral beings. For
those who have led vicious or merely natural lives,
without subjecting themselves to any disciplines,
it anticipates no less horrible a destiny than
transmigration into inferior organisms, at best to
the bodies of the lowest class of human beings.
It seems to consider the lower animals also as
moral beings, and admits the possibility of their
gradual elevation to humanity. The scientific doc-
trine of the evolution of the higher animals from
the lower, seems to favour this view, though no
scientific evidence in the true sense is possible in
the matter. As for the pious, the Vedánta awards two different destinations to them according to the nature of the disciplines they have passed through. The followers of the karma kanda, those whose worship consists in offering sacrifices to the gods, are destined for the Pitriloka, the habitation of the manes, where they pass through a way called the Pritiyana and figuratively described as consisting of a number of phenomenal objects such as mist, dark nights, clouds &c. Through this way they pass to the moon, which either contains the Pitriloka or is associated with it. There they dwell in enjoyment of the fruits of their good works until they, the fruits, are spent out, when they have to retrace their steps to the earth and be re-born according to their merits. On the other hand, the followers of the jnana kanda, the spiritual worshippers of the Infinite, are destined for the Brahmaloka, the world of Brahman. They also have to follow a particular path called the Devayana, the way of the gods. This also consists of a number of elements which are altogether more auspicious than those composing the Pritiyana. The most prominent are the rays of the sun, which perhaps represent spiritual enlightenment. Led through this path to the Divine regions, painted in gorgeous colours, but in language which is evi-
dently figurative, the spirits of the pious are said to live in perfect beatitude, in constant communion with God and in the company of the devas, and never return to any mundane state of existence unless at their own will. Whether this Brahmaloka is the final goal of all rational beings, or there is a higher state of existence, is a matter of controversy among the various schools of the Vedánta Philosophy, of which I now proceed to give a short account.

**THE VEDANTISM OF THE SCHOOLS.**

It is in the detailed interpretation of the fundamental principles enumerated above that the Vedánta Philosophy branches out into schools. Of these, three have the largest following, those of Sankara, Ramanuja and Madhva, the followers of the first, again, outnumbering by far those of the other two. These three perhaps are the only schools that may be called living, and are also important as representing three poles of thought to one or another of which the mind of man naturally turns. To these, I, as a native of Bengal and knowing more of this province than others, shall add the school of Baladeva Vidyabhushana, to which the followers of Chaitanya belong, and that of Raja Rammohan Ray, the founder of the Brahma Samaj, who, faithful to the instincts of a
true Indian reformer, wrote commentaries on the Prasthanatrayam, and whose school, though not sticking to traditional methods in all matters, is yet important as representing a fusion of ancient Indian thought with the thought of the West. That there were more or less opposed schools of Vedantic thought even before the foundation of the earliest of the existing schools, namely that of Sankara, appears evident from the mention of Vedantic teachers in the Sutras, with the points in which they differed in their interpretation of the scriptures. That there were at least two main currents of Vedantic thought before Sankara and Ramanuja, is also evident from these two teachers professing to follow two ancient traditions—traditional methods I mean—in their respective commentaries, and from the former's anticipating, in substance, the views of the latter several centuries before his actual advent, and refuting them in his commentaries. To indicate, however, a few lines of difference followed by the different schools. Though agreeing in the opinion that Brahma is the sole cause of the universe, the schools differ a good deal as to the method of creation and the nature of the power with which God creates. Sankara holds that creation is not real in the same sense and in the same degree as the creator.
The creation of a real world, of a world really different from the creator, would affect his infinitude by placing a reality outside the limits of his existence. Nor could creation be the creator's assuming a particular form, for that would militate against his perfect and unchangeable nature. Nature and the finite soul, therefore, Sankara concludes are not real as such, but only passing appearances of the one only Reality, Brahman, and the power of creation, though eternally existing in him and containing in it the germ of all created things, is in fact a mysterious and inscrutable power, called Maya or Avidya, producing the passing illusions of finite intelligences and material worlds without at the same time subjecting the Supreme Being to these illusions. Thus Sankara is a Mayavadi as to the method of creation and an Advaitavadi or Monist as to the relation of creation to the creator. As the power of creation is a power of producing illusions and not realities, and as the finite does not really exist, but only seems to do so, Sankara conceives that the Divine nature has no necessary relation to the finite and is therefore an absolute or unqualified unity. His Advaitavada is therefore called *visuddha*, i.e., pure absolute or unqualified. Very different is Ramanuja's idea of creation and its relation to the creator. If
created objects, he says, were independent of the creator, their real existence would indeed be inconsistent with his infinitude; but though distinct from him, they are dependent on him and are, in that sense, comprehended in his infinite being. They are, in that sense, his Prakāra or modes, and as such real and not illusory existences. They are necessarily related to him and exist in him eternally in a subtle form before creation and in a developed form in the state of creation. The method of creation, according to Ramanuja, is therefore a parinama, change or evolution of the cosmic form of God from a subtle to a developed state, leaving the extra-cosmic or divine aspect of his nature untouched and unchanged. The necessary relation of the world to God introduces, in Ramanuja's opinion, an element of difference in the divine nature, which is conceived by Ramanuja as a qualified unity—a unity not related to anything outside of it but diversified by relations within itself. Hence Ramanuja's Monism or Advaitavada is called Visishta or qualified. Madhva, otherwise called Anandatirtha or Purna-prajna, was a defender of common sense and condemned Monism in both the unqualified and the qualified shape. Though holding matter and the individual soul to be dependent on God, he con-
ceived the Infinite in such an abstract manner, that he could see no unity between it and the finite. He put particular emphasis on the expressions of duality and difference in the *Upa-nishads* and the *Vedanta Sutras*, and explained all utterances of an opposite drift in the light of the former. His system, therefore, is called Dvaitavada or Dualism, and is really the return of Philosophy from the heights of speculation to the uncritical conceptions of common sense hallowed with a glow of reverential faith. The same remark applies to the system of Baladeva Vidyabhushana. Raja Rammohan Roy follows Sankara in the main, but interprets him in a way that modifies to a certain extent some of the features of his system that are repulsive to common sense. Of the systems of Baladeva and the Raja, I shall, however, for obvious reasons, confine myself to this brief mention. Returning to Sankara and Ramanuja, we find the ethical and spiritual philosophies of these thinkers deeply affected by their differing conceptions of the world and the Divine nature. Sankara, looking upon all differences as ultimately illusory, regards all actions; even the highest, as consistent only with a passing state of ignorance, since they all proceed upon a distinction of agents, things acted upon and the fruits of action. On
the other hand, Ramanuja, to whom distinctions, when rightly seen by the light of Reason, are real, regards the higher duties of life as of permanent value. For the same reason, while the latter sees no incompatibility between the highest enlightenment and the householder’s life, the former extols detachment and regards the anchorite’s life as an essential condition of liberation. Again, contemplating Brahman as Impersonal Intelligence, Sankara conceives even the highest reverential worship as a transitional stage of culture and regards a consciousness of absolute unity with the supreme as the goal of all spiritual discipline. To Ramanuja, on the other hand, Brahman is a Personal Being, and even in the highest stages of communion, the worshipper feels that he is distinct from his object of worship. As regards liberation, likewise, the two schools differ a great deal. The finite soul’s ascension to Brahmaloka, as described in the Srutis and the Sutras, is accepted by Ramanuja as its final liberation, while Sankara, finding that the description of that state of liberation leaves several points of difference between the individual and the Universal Self, teaches that it is only partial or relative liberation that is thus described, and that there is a higher state of absolute liberation indicated in certain passages of
the canon,—a state involving a complete merging of the individual self in the Absolute. Madhva, the Dualist, agrees with Ramanuja in the main as regards ethical and spiritual matters.

**LATER VEDANTIC LITERATURE.**

Besides the commentaries on the three institutes written by the great founders of the schools, a good number of handbooks expounding the philosophy have been written by the founders themselves and their followers. Unfortunately it is only works belonging to the school of Sankara that are well-known throughout the country. Madhva's *Tattvamuktavali* is read in Bengal, but Ramanuja's *Vedantasangraha* and other minor works, and even his commentary on the Upanishads are only heard of. Of works of Sankara's school, the *Upadesa Sahasri* and the *Vivekachudamani* ascribed to him are well-known and so are several smaller tracts said to be written by him, but probably composed by later writers belonging to his school. The *Panchadasi* by Madhavacharya and the *Vedantasaara* by Yogindra-Sadananda are among the best known of minor works on the Vedanta, and have been translated into English. Somewhat less known but still important is the *Vedanta Paribhasha* by Dharmaraja Advaeindra. One of the most ancient books of
this class, but not strictly philosophical in method, is the celebrated Yogavasishtha Ramayana. For English readers I may mention the translations of the Upanishads by Professor Max Muller, by Mr. Roer and others in the Asiatic Society's Edition, by Messrs. Chatterji and Mead of the Theosophical Society, by Pandit Sitarama Sastri and Ganganathjha and by the present writer. The edition done by the two Pandits last mentioned has the singular recommendation of containing translations of Sankara's commentary. The Vedanta Sutras with the commentary of Sankara have been translated by Professor Thibaut and the Bhagavadgita by Professor Telang and many others.

THE VEDANTA AS A BASIS OF POPULAR RELIGION.

In this article I have had no opportunity to say what I think, as to the philosophical basis and the logical strength of Vedantism. My aim has been to give a most general and unbiased statement, untinged by sectarian predilections, of the fundamental principles of the Vedanta. But as a Vedantist I may perhaps be allowed to say at the conclusion of the article that I believe Vedantism, in its essence, to have a very long life before it, as it has had a long life behind it in the past,
as a system of Philosophy and as a basis of popular religions. Every system of Hinduism worth mentioning has built upon it, for it is opposed to none, and it has been alike the ideal aspired after by the novice and the backward in religious culture, and the solace and delight of the advanced devotee. As I understand the Vedanta, I find no authority in it for image-worship as it prevails in the country at the present time. But the early Vedantists believed in orders of beings higher than man and some of them were in favour of honouring them according to the methods laid down in the ancient rituals, though others regarded such worship to be consistent only with ignorance and unworthy of the wise. However, the Vedantic discipline of concentrating the attention in particular objects of Nature and contemplating them as Brahman, since they are his relative manifestations, seems to have given a sort of countenance to Idolatry and so we find Idolatry and Vedantism closely leagued together in various sects both in ancient and modern times. But we also find schools, like the followers of Nanak, who shook off Idolatry but adhered to the Vedanta. The Brahmasamaj movement of the present day was inaugurated as a purely Vedantic movement, and if some of its later leaders loosened the Vedanta
connection on account of their defective scholarship and denational education, the Samaj seems to be now, in its latest developments, tracing back its way to the old affinity and feeling after the old foundations beneath its feet. The Theosophical movement is largely Vedantic and the Ramkrishna or Vivekananda movement professedly so. Muhammadanism and Vedantism meet in Sufism and other esoteric systems of Islam, and there is no reason why the enlightened Mussian of the present day should be blind to the claims of his Hindu brother's revived Vedantism. As to Christianity, appearances point to a not very distant fusion of the most liberal forms of this faith with the most advanced and reformed forms of Vedantism—a fusion far more glorious and fruitful than that of Neo-platonism and Christianity in the early centuries of the Christian era. These appearances are not confined to Europe and America, but are to be seen in this country also in the growing interest of certain Christian converts in the study of the Vedanta and in the attempt made in certain quarters to establish a newly conceived Christian Theology on the basis of the Vedanta Philosophy. There is nothing to prevent the success of such an attempt. The Vedantic doctrine of incarnation, rightly conceived, is so ration.
al and liberal, that if the holy Jesus can be historically proved to have said and felt, as well lived in the consciousness of the truth—'I and my father are one,' no true Vedantist can refuse to accept him as an incarnation of the Deity, as much as Vamadeva of the Vedic days and Sri Krishna of the Bhagavadgita.*

THE VEDANTA—SOME REASONS
FOR ITS STUDY.*

BY MR. N. VYTHINATHA AIYAR AVERGAL, M.A.

THE Vedanta has been described as being both
a philosophy and a religion. And it has
been thought that this combination of the
two into one marks a low stage of civilization.
But any sharp separation of the one from the
other is logically impossible; and if these stand
united in the Vedanta, it is because the two are so
intimately connected, that we cannot possibly
investigate the one without being inevitably drawn
into the other. Philosophy is the science of
sciences; its subject-matter is the whole range of
scientific phenomena; and its aim is to combine
all these into a consistent whole, to dive deep into
the verities underlying them and to decide upon
the First Principles which form the bases of scien-
tific certainty. Thus Philosophy is necessarily
drawn into the problems of ultimate realities, their
nature, origin and mutual relations. It is the

rary Society by the late Mr. N. Vythinatha Aiyar Avergali
M. A.

2 a
handmaid of science, for science depends for the justification of its methods and of its premises upon philosophy. It is also the twin-sister of religion, for in giving a verdict on the foundations of science, it decides the nature and scope of religion as well. The question of the origin of the world and of its phenomena is only another form of the question regarding the existence and nature of its Creator, be it a blind force in independent control of the force-manifestations in the perpetual stream of causation, into which science has resolved and is resolving the march of cosmic events; or be that Creator of the world an intelligent, omnipotent, and benevolent Being, who is immanent in the world, or who watches and controls its process from the outside. The philosophy of the phenomenal cosmos, of its nature and origin, leads us unavoidably to the regions of religion, and the inherent connection between cosmic facts and events on the one hand and their metaphysical explanation and divine origin on the other accounts for the dual character of Vedantism.

It may be thought that we of the nineteenth century, enriched as we are with the intellectual harvest of so many ages can do better than go back to the thoughts of the primitive minds of India. Our intellectual inheritance is the ever-
growing accumulation of the mental activity of many centuries and of more than one continent. We are masters of the distilled knowledge of thousands of generations, of which each has sat in judgment over its inheritance from the past and has passed that inheritance through the searching crucible of intellectual criticism. Physical science was literally unknown to the thinkers of the Vedanta; and a reasoned concatenation of the facts and doings of nature was not theirs. They had not therefore that discipline of the intellect which comes of our logical search into the ways of nature; and it may be asked whether we are to sit at the feet of the antiquated Rishis of the Vedic times, while our intellect has received such training and while we are in possession of such stores of reasoned knowledge.

But a deeper investigation into the nature of the human mind on the one hand and of the problems here taken up for solution on the other cannot but give us a pause in this fancied pride of intellectual growth. The province of Reason is not unlimited and illimitable; and even within its legitimate sphere its sway is not absolute. The whole body of classified and well-arranged facts, in their particular or in their generalised form, and the whole body of inferences from those facts, or
briefly, what we call science is confined to human experience; that is, to the interpretation by the subjective mind of the perennial currents of sensations and ideas. Our reasoned knowledge is limited to the contents of our minds, and to the sphere of our consciousness. It is true that of these contents of our minds we project more than one-half into the imagined void which we conceive to lie outside our consciousness. We erect the material world upon the basis, one may say, of our mental states. But in any view we may take of the scope of Reason, it must be granted that the mind is ever making irrational leaps into the unknown which lies beyond the province of Reason and of Science. There are also phenomena, mental and volitional, which are ultra-rational, or irrational if you please, which as phenomena must be amenable to scientific enquiry, but as irrational, break loose from the legitimate moorings of science. At the one extreme stand the well-ordered sciences of objective nature, and at the other, the apparently chaotic phenomena with which the name of metaphysics is connected. The external world of nature is observed and examined; its several aspects are abstracted; and there arises the hierarchy of the sciences. And these same experiences when looked at from their subjective side melt away into sensations and
THE VEDANTA—REASONS FOR ITS STUDY. 29

ideas, and reason is irresistibly led to furnish them with a substantial basis in the eternal realities of metaphysics. In building up the elaborate system of the objective sciences, the material world is assumed as a reality; and this reality glares us in the face in the machinery of modern civilisation, and in its social and political movements. But these same phenomena, so vast in their multiplicity, are all contained in some mysterious fashion within the four corners of the human mind. Reason is the name given to but a change in the form of the presentation of the contents of the mind. The sciences are all of them but emanations from the contact of the mystery known as the human mind with the metaphysical entity which has been supposed to stand outside the mind and contradistinguished from it. Thus, for our reasoned knowledge a metaphysical basis at each one of its limits is required. It is connected on the one hand with an unknown but assumed matter and on the other with an equally unknown and unknowable mind. Its vision abuts on every side on metaphysical pre-suppositions, which go under the several names of matter, mind, causation, space, &c.

These metaphysical realities or assumptions are thus required to round off the dominion proper of Reason and Science. And we should also remember
that all our boasted intellectual advance is as
nothing in regard to them. They now stand and
have always stood, outside the pale of what we
ordinarily understand by the term knowledge. The
blaze of intellectual light that has grown in inten-
sity and depth with the progress of civilization has
been strictly confined to this side of the impene-
trable veil drawn over metaphysical entities. All
that reason has done in regard to what lies or may
lie outside the range of sense-perception is only
this—the declaration that it is unreachable by
sense and that it is hence unknowable. Of what
lies thus beyond the reach of reason, even exis-
tence, it may be thought, cannot be rightly pre-
dicted. But Spencer and Huxley, while confessing
to the impotency of reason to penetrate into the
recesses of the eternal realities of the universe,
will not yet push their agnosticism so far as to
deny even their reality. "Though as knowledge
approaches its culmination," says Spencer, "every
unaccountable and seemingly supernatural fact is
brought into the category of facts that are ac-
countable and natural; yet, at the same time, all ac-
countable and natural facts are proved in their ul-
timate genesis unaccountable and supernatural."

Now Philosophy ventures to pry into what is
thus screened off from our empirical vision. The
empiricist resolves all knowledge into sensations, and this leads him logically to agnosticism. If we accept that our knowledge is limited to what is revealed to our mind in its commerce with the external world; if we confine our vision, as the empiricists do, to the Knowable revealed to the perceiving mind through the agency of the senses, then indeed should we declare that the ultra-sensual region claimed as its peculiar sphere by metaphysics is impassably shut off from us; agnosticism proclaims this and this alone; its dogma is that the sphere of knowledge is limited to the world of sense-perception; and that non-Knowledge or ignorance is the right frame of mind in regard to what lies or may lie beyond that world of sense-perception. But there is one important fact that empiricism seems to ignore. Science under its guidance has brought or tries to bring within its sphere, the whole range of phenomena, physical and psychical. And its grasp of the physical half of the phenomenal cosmos is thorough-going and secure; but its work in regard to the other half of its subject-matter—the psychical, is not equally exhaustive. It does not seem to have even a comprehension of the whole range of psychical phenomena. And it is exactly that portion of these phenomena which it ignores,
or of which its view is half-hearted and halting, that is, of the utmost importance to man. Among the phenomena most characteristic of man are his religious convictions and beliefs. These with his ideas regarding his moral responsibility fill no small space of his life. In no country and in respect of no nation can it be said that these phenomena relating to religion and morality are insignificant or that they are unimportant. They occupy not only much of the time and attention of all nations, including those who are the most civilised, but exercise also a considerable amount of influence over their conduct through life, as sons, fathers, citizens, &c. It should not be supposed that in modern times the influence of religion has waned. It may be that the fire of the Inquisition and the slaughter of the crusades have disappeared; and in India the cruel pike may have forgotten its function. Our age has learnt to be tolerant in matters of religion, but not thereby to lose sight of the existence of a craving for something other than empiricism and its teachings. These moral and religious phenomena have changed their form of external manifestation, but their springs in our innermost nature yet run fresh and full. And these inherent tendencies that draw us towards the super-sensuous now act mainly upon the ethical side of our nature.
Their force is now as strong as ever, but it is felt mostly in the shaping of our social deportment. The extended vision of modern times has served to extend the sphere as well of our ethical sympathies.

Now it is this side of our nature, these religio-ethical phenomena so strikingly present in us and so potent over our feelings and actions, that modern empiricism has failed adequately to grapple with. If Science is to take under its wings the whole range of phenomena falling within our observation, the neglect by it of these is by no means justifiable. It is not a scientific explanation of the ethical side of man simply to state its psychological origin and development. Our conscience may have come into existence in the particular manner described by the empirical moralists; our religious instincts and beliefs may have been developed out of some of the primitive elements in our nature as the sociologists assert. But the question of their growth is not the question of their authority. And there is the further question of the nature and origin of those primitive instincts themselves from which our notions on Religion and Ethics are said to have sprung up. It is here that modern science has failed in its mission; and it is exactly here that the meta-
physician comes in with his ultra-physical data to emancipate the Scientific Reason which stands entangled in the meshes of First Principles and primitive instincts.

It should not be supposed that in going back to the Vedic times of India for a solution of these metaphysical problems, we are seeking refuge in darkness from light. The thoughts of our ancients have lost none of their wisdom and weight because of their antiquity. It is not simply because, as has been pointed out above, these thoughts refer to a department of our nature on which modern Science has not and cannot shed any light that was not within the reach of the ancient sages. This is true no doubt. But there is a stronger reason for this search into the past than this mere lack of advance in metaphysics since the days of our Upanishads. It is that the sages of ancient India have brought to bear upon these questions an acuteness and strength of intellect which is surprising in itself and is almost unequalled even by the foremost of modern minds. You should not suppose that I am asserting a mythical impossibility in claiming for the ancient Indians a vigour of intellectual perception matchless in its degree. There has been immense progress, indeed, since their time. But this progress
has not been in the perspicuity of intellectual comprehension. "The secrets of the universe have indeed been plumbed, and with the knowledge so obtained, man has turned the world into a vast workshop where all the powers of nature work submissively in bondage to supply his wants."

The almost universal tendency has been to regard the intellectual factor as the ruling and dominant one in the advance made by modern nations. But quite recently attention has been directed to a comparison of the average intellectual development in the old civilizations, with the average mental development under modern civilization; and the result of this comparison is found to be against the latter. Although Western civilization of recent centuries has "developed a strength, a magnificence and an undoubted promise which overshadows the fame and the achievement" of the civilizations of ancient Greece and Rome, "the fuller knowledge and the more accurate methods of research and examination of our own time" says Mr. Benjamin Kidd, "have only tended to confirm the view, that in average mental development the moderns are not the superiors, but the inferiors of those ancient people who have so completely dropped out of the human struggle for existence. Judged by the standard of intellectual development alone, we of
the modern European races who seem to have been so unmistakably marked out by the operation of the law of natural selection to play a commanding part in the history of the world, have, in fact no claim whatever to consider ourselves as in advance of ancient Greeks, all the extraordinary progress and prowess of the modern world notwithstanding. The marvellous accomplishments of modern civilization are not the colossal products of individual minds amongst us; they are all the results of small accumulations of knowledge slowly and painfully made and added to by many minds through an indefinite number of generations in the past, every addition to this store of knowledge affording still greater facilities for further additions. It must not be assumed, even of the minds that have from time to time made considerable additions to this common stock of accumulated knowledge that they have been separated from the general average or from the minds of other races of men of lower social development, by the immense intellectual interval which each achievement standing by itself would seem to imply." The great strides of modern civilization have been the products of the time rather than of individuals. Even those nations which are generally styled the lower races do not appear to be lower than the so-called higher races.
in point of mere intellectual power. This applies to the Maories of New Zealand as much as to the natives of this country. Of our countrymen, Mr. Benjamin Kidd, from whose remarkable book on Social Evolution I have already quoted, says: "These natives have proved themselves the rivals of Europeans in European branches of learning. Indian and Burmese students, who have come to England to be trained for the legal and other professions have proved themselves not the inferiors of their European colleagues; and they have, from time to time, equalled and even surpassed the best English students against whom they have been matched."

If this be the verdict of modern science even in regard to the degenerate race now inhabiting India, degenerate through centuries of Moslem invasions and anarchy, what necessity is there to press the argument in favour of the intellectual greatness of the ancient authors of Indian philosophy and Indian metaphysics? And as in this region of ultra-sensuous perception, modern researches have proved inefficient and ineffectual, and as in consequence the perception of truth depends necessarily upon our innate powers, it stands to reason that the philosophical thoughts of the ancients endowed as they were with an extraordinary acuteness of
mental vision, may be studied to advantage even after the lapse of so many centuries.

What is this philosophy and this metaphysics to which so much importance is here attached? This high estimate of its value should not be imagined to be due, in any the least extent, to the unconscious predilection in us for what belongs to our country. Oriental scholars enjoying a wide reputation and accepted as undoubted authorities on the subject are unanimous in their praise of the Vedanta as a philosophy. Professor Max Müller's views on the subject are too well-known to need repetition here. In his lectures on the Vedanta he says, for instance: "Such speculations are apt to make us feel giddy; but whatever we may think about them, they show at all events to what a height Indian philosophy had risen in its patient climb from peak to peak, and how strong its lungs must have been to be able to breathe in such an atmosphere." "The system of the Vedanta" says Professor Deussen "as founded upon the Upanishads and Vedanta Sutras and accompanied by Sankara's commentaries upon them,—equal in rank to Plato and Kant—is one of the most valuable products of the genius of mankind in its search for the eternal truth." And it is not too much to claim the right at least to a
respectful hearing for that which has evoked such feelings from European savants.

As a philosophy the Vedanta inquires into the ultimate bases of phenomena. We interpret the material world and the world of mind, so mysteriously joined to our bodies, through our sense-impressions. Matter is to us coloured; its sounds are caught by our ears; we perceive its surface as hot or cold, rough or smooth, plane or spherical; and we enjoy its smells and tastes. The forces that sway matter, both molar and molecular, we ponder and study. In these and other ways we grapple with the material world with the senses as our instruments, and it is through these alone that we can reach that world. Now the question arises as to the existence of something behind these attributes, as the substratum of which colours, sounds, smells, tastes, &c., are but appendages and belongings. This substratum, if it exists, cannot be known through sense-impressions. For then it will become a colour, a sound, a taste, &c., and thus will be brought down to the category of attributes. The Vedanta declares therefore that the eternal cannot be known through the transient. This eternal substratum of the world, not thus accessible to our senses, we yet believe to exist. We may go the whole way with the philosopher
who would [resolve all our knowledge into sensations; it may be a matter of rational conviction to us that what is inaccessible to the senses must necessarily be beyond the sphere of knowledge. And it is but reasonable to say that we are not entitled to speak of what is unknown and unknowable. Yet the conviction of the existence of a material world is too strong to be got rid of by such arguments, cogent though they appear to be when looked at from the analytical point of view. It is insufficient to say that the mind has built up a world of its own from the materials supplied to it by the senses. The repeated experience of sensations by us in particular groups and in particular successions, it has been said, explains the growth in us of the ideas of material objects and their orderly arrangement. But whence this possibility of experiencing them repeatedly? Why should the same group of sensations recur to us and to others in any particular order or arrangement? Why this perdurability among the groups of sensations? A material object is not simply the summation of a number of sensations. These sensations are permanently bound up together into inseparable bundles. What is the explanation of this permanent bond among these attributes of matter? Is there a nucleus
corresponding to our idea of matter around which these experienced attributes cohere? Or, is it the mere play of fancy to ascribe to them a permanency which does not belong to them?

Here is a question before which science along with reason stands discomfited and spell-bound; and in despair, it would destroy and deny what it cannot comprehend. The perceiving mind is no less mysterious than the perceived matter; and Nihilism has solved the mystery by destroying the former as well as the latter. The existence of these mysteries both in the sphere of sensations and in the sphere of the external world does not in the least affect the practical concerns of life. The objects continue to be what they are and continue to serve the usual purposes of life even though we may be unable to comprehend their innermost texture. They may be but aery combinations of sensations, tangible to the muscular sense, coloured to the vision and so on. Or they may be substantial realities of which these attributes are only the outside varnish. So also in regard to our minds. There may be nothing in the back ground of our consciousness corresponding to our notion of mind and self. The I of our conviction may be an illusion built on no logical basis. The fleeting experiences of the mind have, it is
true, a bond of union, which bond is a mystery unsolved by sense-experience and rationalism. Here also what is insoluble has been destroyed and the Gordian knot has been cut by an easy process. But these ghosts of a material world and a mental world cannot be so readily allayed. Nor can we rest satisfied even with a simple negation of the possibility of knowing them. The Vedantic philosophy fully recognizes this element of permanency in our psychological structure of a material world and of a mental world. To the knowledge of these two departments of experience resolvable into sensations, we have to add the notion of permanency. The attributes of matter are permanently bundled up together in various ways; and so also the attributes of mind. And whatever explanation may be attempted of this notion of permanency as due to variations in our experiences, such an explanation cannot do away with the fact. A residuum there is, all must admit, which sensations do not and cannot account for; and of this residuum Western philosophy does not seem to have attained to a clear vision. It has either rested contented with the assumption of a gross material world as present to our ordinary vision or it has destroyed it completely. It has not sifted its contents with care and laid firm hold of their ultimate meaning.
Even Mill, whose analysis of matter is so striking and acute, did not see that the permanency or perdurability which he asserted as the residual factor both in his analysis of matter and of mind, required a fuller recognition as an ultimate element in the philosophy of perception than he was willing to accord to it. This element of permanency in the material world of perception and in the mental world of self-consciousness is set up as an ultimate fact of philosophical analysis by the Vedantins; and they call it Mūla prakṛiti or Māya. The term Māya has no doubt came to mean illusion; but this was not its meaning in the text of the Vedanta as originally expounded. The word Māya occurs but very rarely in the Vedas; and it means in them not illusion, but Divine power. The same is true of the significance of the term in the few passages of the Upanishads where it is used. When the Lord is said in the Brihadāranyaka-Upanishad to appear as multiform through the Māyas, the reference is clearly to His creative Sakti. The Lord is represented as careering rapidly through the appearances of the world with “the horses yoked.” The mind has the horses or the senses under its control; and with these yoked or controlled horses, it proceeds to its work of creative knowledge. But in the ultimate analysis, the horses,
the world and all resolve themselves into the Brahman. "This Atman is the horses, this is the ten, and the thousands, many and endless." In the Svetasvatara-Upanishad, it is said that "the sages, devoted to meditation and concentration, have seen the power belonging to God Himself." The sages "meditate on the river whose water consists of the five streams, which is wild and winding with its five springs, whose names are the five vital breaths, whose fountain-head is the mind, the course of the five kinds of perception." The five streams here referred to are the five percipient senses which wind about the material structure of the world; and the river of the phenomenal runs along the course of mental perceptions. It will be seen that here again the idea of illusion is entirely absent. And when the student is called upon to identify Prakriti or nature with Maya in the same Upanishad, and the Lord is spoken of as the Mayin, the reference is, as Professor Max Müller observes, only to the creative power of the Lord.

The Vedanta corrects the popular notion of the material world and contends that it has no essence independent of mental perception—a contention which is amply sustained by modern science. That material existence is to us known only as perception is a doctrine of the Vedanta, as it is a doctrine
of the modern theory of knowledge. The former is perhaps more emphatic in maintaining the unreliable character of sensations and appearances—unreliable as implying anything more than what they are, as contrasted with noumenal realities—a doctrine that has the full support of modern psychology. To revert to the Vedantic doctrine of Máya. Now this Máya is the Sakti or power of God and is anádi—beginningless. It is divine in its origin but is not eternal, for it may come to an end. Reserving this latter aspect of the question for the present, the significance of the statements that Máya or Sakti is divine and that it has endured from the beginning should be attended to. We found that beyond and behind the phenomena of perception, underlying the attributes or bundles of possibilities of sensations, constituting the objects of the material world, there is the important fact of their permanency. Sensations viewed as elements in our experience are fleeting; one sensation follows another in rapid succession and no one sensation endures continuously for any appreciable period of time. But when these same sensations are projected out of the mind into the external, they are viewed to be the attributes of material objects or in philosophical language, as bundles of sensations—they lose their fleeting character and
acquire the opposite characteristic of permanency. It is this that requires a full recognition and explanation. And we claim for the Vedanta the cleanness of analytical vision to have recognised this residual element in our experience after making the fullest allowance for the fleeting sensations in which it is embodied. Through our consciousness, whether centred in self or directed out of it, there runs in a perpetual current this conviction of perdurability; and the philosopher has therefore to fix his attention on this and to take its bearings as an element of the universe. The Vedantin declares it to be a power of Brahman, that is, he declares that it is an ultimate fact. Whether this declaration amounts to a confession of his ignorance of the ultimate nature of this fact or whether we can clothe this statement with a realizable significance is another question. But we need not seriously object even to the former alternative, for we may then seek refuge in the observation of Professor Max Müller that

"there is a point in every system of philosophy where a confession of ignorance is inevitable and all the greatest philosophers have had to confess that there are limits to our understanding the world; nay, this knowledge of the limits of our understanding has, since Kant's Criticism of Pure Reason, become the very foundation of all critical philosophy."
The doctrine of Máya is the Vedantin's view of cosmogony; Brahman, the supreme, is associated with a certain power called Máya or Avidya to which the appearance of this universe is due. Why is this power called by such names as Máya, neg-science, ignorance, illusion? It is because in the view of the Vedantin, this power and its effect, that is the world and its belongings, stand in the way of our reaching to a knowledge of the ultimate truth. Now knowledge is either of phenomena or of noumena. And engrossed in the former we are unable to rise to a knowledge of the latter; and as a knowledge of the eternal realities affects our destinies most intimately, whatever operates to screen them off from us must be viewed as darkness keeping us away from light. Remember that science in its soberest form has made no declaration hostile to metaphysics; and God has yet a place in the universe. If so, a knowledge of God, of the relation that subsists between Him and ourselves, and also of His relation to the material universe ought to be admitted to be indispensable, or at least desirable. And if the phenomenal knowledge that comes to us through the senses tends to withdraw us from the search for the underlying principles of existence, we may well term this phenomenal knowledge Avidya.
—ignorance, not because it is valueless in itself, but because of its self-centering hostility to the higher kind of knowledge. The Vedantin confines his attention to the highest problems of life; and views with disfavour whatever tends to obscure the philosophic vision. And the phenomenal has this tendency; and receives hence such names as avidya, illusion, &c. These names have given offence to many, both in this country and elsewhere, but it will be seen that they have done so without reason. For in the first place we must allow that the problems of metaphysics have important bearings on human life. If our life-time here is but an instant in the eternity that belongs to us, if in consequence our temporal concerns are as nothing in the balance when weighed with our concerns in the hereafter, if these premises, in no way rejected even by agnosticism, be granted, then indeed it follows indisputably that the problems of the future have a higher value than those of the present. This absolute superiority, if once admitted, justifies fully the language adopted by the Vedantin in respect of the material concerns of life. These concerns are paramount, it is true, to physical science and to us as denizens on this earth. Science endeavours to make the best of the present; and it is but just and proper that it should do so. But
that is no reason why we should forget that the concerns of science are after all subordinate to the higher concerns of philosophy. Children when engaged in their engrossing pastimes may not have the remotest glimpse of the serious problems of life that await them in the future, and yet the latter are more important than the former. And we should not quarrel with children for securing the utmost pleasure from their pastimes while engaged in them. The same applies to the relation between philosophy and science. The latter engrossing as it is and, we may say, engrossing as it ought to be, has yet to yield to the other in intrinsic worth; and may be called Avidya, Maya, in comparison. To show that the statement, that even agnostic science has not brought its good sense into peril by a complete negation of metaphysics, is not gratuitous, permit me to refer to a remarkable passage in the writings of Huxley:

"The student of nature, who starts from the axiom of the universality of the law of causation, cannot refuse to admit an eternal existence; if he admits the conservation of energy, if he admits the existence of immaterial phenomena in the form of consciousness, he must admit the possibility, at any rate, of an eternal series of such phenomena; and, if his studies have not been barren
of the best fruit of the investigation of nature, he will have enough sense to see that when Spinoza says, 'by God we understand an absolute infinite Being, that is an unchangeable Essence, with infinite attributes,' the God so conceived is one that only a very great fool would deny, even in his heart. Physical science is as little Atheistic as it is Materialistic."

The material world then is a recognised reality and has its origin in Brahman. The Vedantin admits the knowledge of perception to be right knowledge, but such only in its relation to this world and its concerns. But this knowledge and these worldly concerns he distinguishes from the knowledge of philosophy, of God, creation, &c. This latter knowledge is possible to man, in his view. But to reach it, he must not forget the fact of the existence of the verities of philosophy foreshadowed even in perceptual knowledge. We have already said that these abut us on every side even in our dealings with phenomenal appearances. This recognition of their existence as distinguished from the knowledge of their manifestations and effects, is the first step in the process that is to lead us up to a knowledge of Brahman. But this recognition is not sufficient by itself for the successful arrival at the final goal. When standing
on this side of the vestibule of God, when studying the multiplex manifestations of the complex machine of the universe from the outside, hardly able to enter into its revolving wheels and flying belts, the true spirit of scientific investigation would have felt the insignificance of the inquirer in the presence of the vast conglomeration of energising matter. The man of science may then say with the poet, that he feels,

A presence that disturbs me with the joy
Of elevated thoughts; sense sublime
Of something far more deeply interfused,
Whose dwelling is the light of setting suns,
And the round ocean, and the living air,
And the blue sky, and in the mind of man.

If this be the right frame of mind even in regard to the inquiry into the material manifestations of God's Máya, what should be the preparation of mind required, to render us fit to approach nearer to the throne of the Eternal? The Vedantin rightly insists upon renunciation, tranquillity, self-restraint, and śraddha or faith, as the necessary conditions antecedent to the commencement of the inquiry into Brahman. For what is it that he is in quest of? It is not the phenomena of the world which he should observe and examine and dissect with vigilant eyes. It is not simply an enumeration, nor even a classification and analysis of his mental phenomena. This world is the world
of action; and in it alone is there room for the play of the senses. If we would get at the truths which lie beyond and behind it, we must suppress our action and suppress our senses. However valuable these are when dealing with the world and its phenomena, though their work as mind-builders should also be recognised, yet when we go to dissect the contents of the mind, our senses and activities are hindrances and not helps in our researches. Even Professor Max Müller fails to grasp the full import of the logic of the Vedanta when he says that "the object of the Vedanta was to show that we have really nothing to conquer, but ourselves, that we possess everything within us, and that nothing is required but to shut our eyes and our hearts against the illusion of the world in order to find ourselves richer than heaven and earth." It is true that the search for the truths of the Vedanta must be into ourselves, and that we must shut our eyes and hearts if we would engage in that search undisturbed by them. But the riches higher than those of heaven which our Self is to reveal, is not to be the exclusive result of this shutting up of our eyes and hearts; nor should it be said that the Vedantin requires every individual among us so to stand unaffected by his sense-organs and by his sentiments and emotions. If
you seek communion with the Brahman enthroned on your inner Self, you should approach Him with singleness of purpose and exclusive devotion. The Vedanta is jealous of rivals and would stand alone in the intellectual embrace of its devotee. To understand God, to comprehend the process of creation, the nature of the human soul and its past life and future destiny, the Self must be grasped in its entirety and in its inmost nature; and to do this the student must abnegate whatever is calculated to disturb him in his absorbing subjectivity. The tranquillity, misnamed apathy and quietism, is this indispensable imperturbability by external calls without which the mind cannot possibly soar up the peaks of the Vedanta. This is not any dreamy imagination that the Hindu mind specially indulges in; it is no indication of any absence of a genius for system and order in the Hindu intellect; nor is it the hurling of thought "as a venture into the nature of metaphysical conceptions." It is the only path open for man to win what knowledge he can of the realities that ever elude the grasp of the unthinking mind. The Vedanta ignores the phenomenal, not because the phenomenal is unimportant, but because it is beyond the special sphere of investigation which it marks out for itself; it is subjective, because by
being subjective alone can it accomplish its task; and it would forget the world and withdraw the mind from all temporal calls, as then alone there is a chance of man reaching to a knowledge of its teaching.

The Vedanta requires:—

That blessed mood
In which the burden of mystery,
In which the heavy and the weary weight
Of all this unintelligible world
Is lightened; that serene and blessed mood
In which the affections gently lead us on,
Until the breath of this corporeal frame,
And even the motion of our human blood
Almost suspended, we are laid asleep
In body, and become a living soul:
While with an eye made quiet by the power
Of harmony and the deep power of joy,
We see into the life of things.

The mind, thus withdrawn from the phenomenal and also from the cravings of the body with which it stands associated should approach the question of the Vedanta in a spirit of true faith and devotion, and not in that of cavil. The faith here insisted upon may be said to stand at the basis of all religions; and the Vedanta does not stand alone in this respect. But it is no blind faith that is demanded of the student. In that case, there is no room for enquiry or for conviction or knowledge. The demand is negative rather than positive. The Vedanta will have no determined atheist as its disciple, but demands that the inquiring mind should approach
it in a spirit of meek reverence. Reason should be the guide, but not the tyrant of the philosopher. "There is so little which Reason, divested of all emotional and instinctive supports, is able to prove to our satisfaction that a sceptical aridity is likely to take possession of the soul." The mental mood should not be that described by Wordsworth in the following lines:

Till, demanding formal proof
And seeking it in everything, I lost
All feeling of conviction; and, in fine,
Sick, wearied out of contrarities,
Yielded up moral question in despair.

"In this mood all those great generalised conceptions which are the food of our love, our reverence, our religion, dissolve away."

I said above that the Vedanta demands faith from its disciple. It is only when the student goes to the subject with faith that his eyes open into the vista of divine truths: "A man who is free from desires and free from grief" says the Katha Upanishad "sees the majesty of Self by the grace of the Creator. The Self cannot be gained by the Veda, nor by understanding, nor by much learning. He whom the Self chooses, by him the Self can be gained."

Few there are who feel an inclination for such inquiries; and of these but few understand what
they are about. We all know that death is the portion of us all. But how many even of those brought to its very doors can bring themselves to attend to its significance? In the heyday of life, when the blood leaps along our veins, it is but excusable, nay it is reasonable, that we should make the most of the world for which we are then best adapted. That is then our duty to ourselves and to the past and the future generations. But when the best part of our worldly mission is over, when we have contributed our mite to the smooth flow of life amidst its rugged paths, it is but natural that the phenomenal should loosen its hold upon us and allow us at times at least to look at the fundamental facts of the universe. It no doubt occasionally happens that this philosophic mood comes upon us unexpectedly even when young, as was the case with Náchiketas, of whom it is said that “faith entered into his heart,” even when he was a boy.

The faith that we here speak of is not subversive of Reason and it is viewed only as a frame of mind that is to lead us up to knowledge. Knowledge, not faith, is according to the generally accepted doctrine, the ultimate requisite for the true comprehension of the Brahman. The Brahman who is “hidden in all beings,” that is, who is to be re-
vealed to our vision only by a deep search into our own innermost heart, is seen "by subtle seers through their sharp and subtle intellect." I where the Brahman is, "the sun does not shine, nor the moon and the stars, nor these lightnings, much less this fire," if He is such that "when He shines, everything shines after Him; by His light all is lighted," how can we apprehend Him but by the light of grace and knowledge shed by Himself on our minds?

I cannot within the short compass of a lecture explain, even if I had the necessary ability and knowledge, the doctrines of the Vedanta, regarding the nature of the Paramatman, the nature of the jiva, of its life in this world and of its passage to the next, and the other connected questions. I have endeavoured only to offer some reasons to show that the Vedanta deserves our careful attention and that one may set down those dabblers in philosophy who will speak of it in a spirit of supercilious contempt, as persons who have no claim whatever to approach the subject. The Vedanta which gives us a knowledge of the true God, which preaches "as with a voice of thunder" the virtues of self-denial, charity and universal benevolence, which induced powerful sovereigns among us to descend from their thrones and abandon their pala-
ces to meditate in solitary forests on its problems and teachings, and which promises Immortality as the final outcome of its knowledge, can this be to the thinking mind a subject for contempt or ridicule? "In the world of nature to reveal things hidden, to sanctify things common, to interpret new and unsuspected relations, to open a new sense in man; in the moral world, to teach truths hitherto neglected or unobserved, to awaken men's hearts to the solemnities that encompass them, to deepen our reverence for the essential Soul, to make us feel more truly, more tenderly, more profoundly, to lift the thoughts upward through the shows of time to that which is permanent and eternal, and to bring down on the transitory things of eye and ear some shadow of the eternal, till we:

"feel through all this fuzzy dress
Bright shoots of everlastingness"

this is the office" which the Vedanta shall not cease to perform as long as it is approached in the proper spirit. We may say of the Vedanta what the critic has said of the poetry of Wordsworth, that "the more thoughtful of each generation will draw nearer and observe it more closely, will ascend its imaginative heights, and sit under the shadow of its profound meditations, and in propor-
tion as they do so, will become more noble and pure in heart.” I feel no hesitation therefore in closing these observations with the appeal addressed to us Hindus by a foreign admirer of the Vedanta:

“So the Vedanta, in its unfalsified form, is the strongest support of pure morality, is the greatest consolation in the sufferings of life and death,—Indians, keep to it!”
THE VEDANTA RELIGION.*

BY PROFESSOR M. RANGACHARIAR, M. A.

Vedanta is a name which is generally given to the Upanishads. In this connection it is interpreted to mean the end of the Vedas, that is, the last portion of the revealed scriptural literature of the Hindus. It is also used as the name of a well-known system of Indian philosophy which is mainly based on the teachings of the Upanishads. The word may, however, be more appropriately understood as the end of all knowledge. What, then, is really the end of all knowledge? Even the physical sciences have been said to be like the kind mother who, when asked merely to give bread, gives also the invigorating milk of ideas. So, the immediate practical utility of knowledge is certainly not the best part of it. In that transfiguration of man's mind, which is brought about by means of grand, noble, and all-comprehending ideas, consists largely the value of knowledge as an aid to human progress. "The ultimate problem of all thought is," it has been well remarked by a writer in the latest number of Mind, "the relation of the Finite to the Infinite, of the Universe to the Primal Source

* Reprinted from the Brahmavadin, September 1895.
of Being from Whom all existence proceeds.” There is certainly nothing higher for the human understanding to try to know than the nature of this relation. It is an “open secret” which very few persons are able to read intelligently at all; and even among the gifted few, who read it in one way or another, there is much room for wide differences of opinion. This relation between the Universe and its Primal Source has not been, at all times, understood anywhere in the same way; nor have the different peoples of the earth looked at it from time to time in the same light. Nevertheless man has had, all along in the course of his history, to live out his life from day to day relying upon some sort of belief in regard to this all-important relation between the Finite and the Infinite. Indeed the history of man’s apprehension of this relation everywhere determines the history of his religion; for, religion is nothing other than the knowledge of this relation and the consequent adjustment of human thoughts, feelings, and activities in accordance with that knowledge.

While the Upanishads and the Bhagavadgītā form the scriptural foundations of Vedantic thought in India, the formulation of the Vedānta-philosophy is to be found in the Aphorisms (Sūtras) of
Badarayana; and therein it is declared that the object of the Vedânta is to know the Brahman, which is the cause of the birth, existence, and dissolution of the Universe. It is clear from this that the Vedânta does not at all question the existence of the Infinite, and also that it derives the Finite itself from the Infinite. Materialism is beginning to be already so completely discredited even in the West as almost not to deserve the name of philosophy; and in the history of Indian thought it never had any really serious and important place assigned to it. The Indian mind has been too logical and too contemplative to assert that the Finite is all in all. It cannot be denied that a few Indian men of learning have occasionally played with materialism; but India as a whole has never been able to shake off the awe-inspiring and ever-present steadying weight of the Infinite. Therefore the Vedânta, while taking into consideration the relation between the Finite and the Infinite, has had only the choice between three alternative views to adopt, which views may be characterised as (1) mechanical, (2) organic, and (3) monistic. The first view holds both the Finite and the Infinite to be real, and conceives the relation between them to be more or less akin to that between an engine and its maker who is also
its driver. This may be said to be the view of the Dwaita Vedanta. The second view also holds both the Finite and the Infinite to be real, but fuses them together into a single organic whole by conceiving the relation between them to be like that between an organism and its life or 'vital force.' This is the Visishtadwaita Vedanta. The third view holds the Infinite to be the only reality, and conceives the Finite to be merely an illusory reflection are representation thereof. And this is the Adwaita Vedanta. In none of these schools are we led to apprehend the Infinite merely as a distant God; in all of them we may easily notice the belief in what has been aptly called the interpenetration of the spiritual and the material worlds, for the God of the Upanishads is all-pervading and is both far and near at the same time. Further, the Vedanta however understood, knows only one God, only one Infinite; and man is called upon to see that the purpose of life is to help to fulfil the purpose of universal creation by himself realising, and enabling others to realise, the divineness of human nature and its goal in the God-head. There is, however, no agreement between the various schools of the Vedanta as to the details of the exact nature of the ultimate condition of the liberated human soul. There is no exclusiveness about
the religion of the Vedanta; the gates of its temple are open for all to enter. The enlightened Vedantin is expected to make no distinction between a Brahmin, a Chandala, a cow and a dog, between friends and foes, as well as between the virtuous and the sinful. One of the excellent features of the Vedanta is its open recognition of the ethical and spiritual oneness of man's nature.

To the Monistic Vedântin the way of knowledge is the way to Moksha—to liberation from the trammels of ever-recurring births and deaths. According to him God is altogether inaccessible to human thoughts and words, and all forms of worship and prayer only go to make the unconditioned appear as conditioned. Nevertheless, Upâsanâ or worship is recognised as a necessity even to him, as he holds it to be of great value in preparing the human soul to receive with calm illumination the great truth of its oneness with the Divine. The followers of the other two schools of the Vedânta see in God the harmonious synthesis of the most perfect ideals of truth, goodness, and beauty. To them religious worship is an inviolable duty, and the way of worship is the way to Moksha. Then, what is the kind of worship that is enjoined on all those who follow in some way or other the teachings of the Vedânta? The
old Vedic way of worship consisted in offering prayers and sacrifices to the deities. "It is no exaggeration to state that no nation appears at the dawn of history so full of prayer and praise as the Hindu Aryans," says a Christian Missionary in a recent work of his on Vedic religion. When, however, this profusion of prayer ceases to flow from the abundance of genuine feeling in the heart, and when sacrifices lose their original significance in the way of establishing the wished-for kind of communion between the worshipper and the deity, then prayers get petrified into mere formulæ, and sacrifices become altogether meaningless rituals. Worship which is, on the practical side, the essence of religion becomes the shield of hypocrisy and deceit. This does not take place before the old ideal of religion and of man's duties is felt to be more or less inadequate in the new circumstances, and a new one is slowly beginning to get itself established. We find clear signs of such a change even in the Satapatha-Brāhmaṇa wherein it is said:—"He who sacrifices to the Atman, or the Self, is superior. One should say, 'There is he who sacrifices to the gods,' and also 'There is he who sacrifices to the Atman.' He who understands that by such and such a means such and such a one of his members is rectified,
and that by such and such another means such and such another of his members is restored,—he is the person who sacrifices to the Atman. He is freed from this mortal body and from sin in the same way in which the serpent is freed from its worn-out skin; and acquiring the nature of Rik, Yajush, and Sāman, and of the Sacrifice, he attains to heaven. On the other hand, he who understands that gods are to be worshipped with such and such an oblation, and offers it up to them, is like an inferior who pays tribute to a superior, or like a Vaisya who pays tribute to the king. This person does not conquer for himself so great a world as the other does.” Do we not here see that the religion of self-discipline and self-culture is already trying to assert itself as against the old religion of sacrificial rituals? It is indeed far better for a man to fortify himself against temptations, and subdue the evil that is in him, than perform rites and offer numberless sacrifices of various kinds to various deities. The object of all true worship must be not so much to please God as to make man worthy of His love. Even in the Code of Manu, which distinctly enforces caste, ceremonial laws and ritualistic religion, we find evidence enough to indicate the existence of a strong partiality in favour of the Vedanta. “The man,”
The Vedanta Religion.

says Manu, "who, recognising himself in all beings and all beings in his own self, sacrifices to the Atman, enters into absolute freedom." In all probability the freedom that is referred to here is the freedom from the bondage of the Law, that is, from being subject to the operation of ceremonial and ritualistic regulations concerning society and religion. It may mean Moksha as well.

In the Upanishads there are many passages which clearly set forth this very change in the ideal of worship. The second Khand of the Mundakopanishad emphatically declares that all those, who believe in the saving efficacy of sacrificial rituals and perform them, are foolish ignorant, and self-sufficient men, going to ruin and destruction like the blind that are led by the blind. In the place of elaborate rituals it enjoins austerity, faith, peacefulness, retirement into the forest, and living by the begging of food. In the very last Anuvaka of the Narayanija portion of the Taittiriyopanishad, we have a passage in which the various elements of the sacrificial ritual are replaced by the elements required for character-building, obviously with the object of pointing out that Vedantic Worship is far different from Vedic Worship. The same Narayaniya portion of the Taittiriyopanishad speaks of truth, austerity
temperance, peacefulness, liberality, duty, upbringing of children, worship in the way of kindling the sacred fire, &c., mental contemplation, and resignation, as things of the highest importance without which no man would be able to realise for himself the glory of God. The Vedântic religion is distinctly not a religion of mere rituals but one of righteousness; and in another Upanishad self-restraint, charity, and mercy are naturally regarded as being very much better materials of worship than forms of rituals. In this age of individualistic self-assertion the Vedântic discipline of self-denial may appear too rigorous, cold, and uninviting; but the seeds of salvation for individuals, as well as for communities of individuals, are always to be found only in the faithful practice of difficult self-denial. Self-assertion strengthens the bond of Karma, while self-denial leads to the freedom of the soul—that blissful freedom from the bondage of matter which comes to man only when he deserves it. Every soul that is bound to matter has to work out its own liberation, and nothing can show better, than the Vedântin's theory of Karma, how what a man does here makes or mars his hereafter. The unborn and immortal part of man, namely, his soul is alone responsible for the
acquisition of Moksha either through the knowledge of truth or by deserving the grace of God. The soul alone is the friend of the soul, the soul alone is the foe of the soul. Man's sense of moral responsibility can in no way be made stronger. It is but proper to point out that with the Vedântin self-denial does not necessarily mean either quietism or asceticism. According to the Gita it implies the willing performance of the duties incumbent upon us without attachment to the results flowing therefrom, whatever may be the rank in which we are placed to fight out the battle of life. All forms of worship are good, according to the author of the Gita so far as they go to aid us in combining, in the conduct of our lives, honest and earnest work with sincere resignation and disinterested self-sacrifice; and indeed one of the best forms of worship is declared to be the worship of silent contemplation.

The Gita recognises that all are not capable of having the same knowledge of truth and of submitting to the same discipline of self-denial and adopting the same manner of worship, and thus takes it for granted that all cannot be of the same religion. "The religion of the many must necessarily be more incorrect than that of the refined and reflective few, not so much in
its essence as in its forms, not so much in the spiritual idea which lies latent at the bottom of it, as in the symbols and dogmas in which that idea is embodied.” This remark of a thoughtful English writer is so true that it needs no corroboration, and our own Vedântic Scriptures wisely refrain from all particularisation of forms, symbols, and dogmas. “In whatever way people come to me,” says Sri Krishna, “in that same way do I accept them.” Forms and symbols and dogmas are not at all essential to the true Vedântic Religion. But it does not despise them, seeing that many of us cannot do without them, even when they are not of the best kind. It is said again in this our Divine Lay—“Those who are devoted to other gods, and offer worship with faith, even they, Arjuna, worship me in reality in a way that is not law-ordained. I am indeed the lord and receiver of all worship; those who do not know me as I am fall in consequence. The worshippers of the gods go to the gods, ancestor-worshippers go to the ancestors, spirit-worshippers go to the spirits, and those that worship me go to me. Whosoever with devotion offers to me a leaf, or a flower, or a fruit, or water, that I accept as an offering brought to me with devotion by one who has a well-disciplined soul. Whatever
you do, whatever you eat, whatever you offer as sacrifice in the fire, whatever you give, or whatever austerities you practise, O Arjuna, purpose it for me."

The Vedantic Religion, accordingly, believes in one and only one God, in His omnipenetrativeness, as it has been aptly termed, and in the spiritual oneness throughout of human nature and human destiny. It is not exclusive, and has no peculiar rites and symbols and dogmas. But it does not object to any form of worship, as long as such worship is in harmony with the aspiring heart of the worshipper. It enforces self-discipline and self-culture, and teaches man to realise the life of righteousness as the best means of worshipping God and of obtaining deliverance and bliss. It is in this manner truly catholic and wisely tolerant.
THE ETHICS OF THE VEDANTA

BY THE LATE MR. N. VYTHINATHA AIYAR, M.A.

THE doctrine of Karma is, in all its essential features, the same for the three systems of the Vedanta philosophy. Whatever may be the conception formed of the ultimate nature and lot of the individual Jiva, whether they regard it as the supreme soul in temporary obscurcation, or as a distinct entity now and for ever, and whatever view they may hold regarding its relation to the Brahman, Hindu philosophers are in entire accord on the question of the force that determines for the individual his career upon this earth. The life of each man is shaped for him in the main by karma or conduct. But what is this karma, which is so potent over our lives? A bare statement of the theory in its extremest outlines seems to bring it perilously near to fatalism. But the two are quite distinct and even diametrically opposed. The latter is destructive of all responsibility in man; it reduces him to a mere automaton moving along grooves cut out for him by an

* Reprinted from the Brahmanadin for October 1895.
inexorable power. The Hindu conception of the human will and human responsibility is far different from this. The question of the Liberty of the Will, originating in most part in the unfortunate application to the Will of the term Liberty, a term that has no more connection with it than any other term like whiteness, sweetness, &c.,—this controversy seems to be unknown to Hindu Philosophy. But the doctrine of \textit{karma} leaves to the individual will the maximum amount of freedom that may be claimed for it; it makes the individual and the individual alone responsible for the whole of his career here. He is not under the control, in his voluntary actions, of any irresistible power external to him; he has not to suffer vicariously for the sins of others; and he cannot hope for redemption through the vicarious expiation of another. He knows that he has to bear the whole burden of his conduct himself.

\begin{quote}
Yes, all the deeds that men have done,
In light of day, before the sun,
Or veiled beneath the gloom of night,
The good, the bad, the wrong, the right,
These, though forgotten, re-appear,
And travel, silent, in their rear.
\end{quote}

This escort of \textit{karma} which thus ushers the individual into this world is the aggregate of his deeds, good and bad in his past lives. This is his \textit{sanchita karma}, the aggregate of past deeds. Of
this total aggregate, each particular deed works out its results on the individual in its due course. When a Jiva enters upon its career of life in a particular animal frame, it does so in expiation of some one of its deeds in the past. This, of which each one of us is now experiencing the result, and which has given us this particular physical and mental configuration, is known as Prarabdha karma—the commenced deed. The deeds which we may perform in the future form the Agami karma. The entire exhaustion of the aggregate karma of the individual would be tantamount to final liberation from the bonds of life and death, and hence would mean salvation. To this exhaustion the individual has to work his way; and destroy the accumulated karma of the past with the aid of his conduct in the present and in his future. But the course, already entered upon by him under the influence of what is known as Prarabdha karma, must be gone through to the end. Our present life belongs to it; and we cannot shake it off in the middle. But while undergoing the effects of this much of our deeds in the past, we may also be working our way to the final liberation from the sway of karma, and to salvation, by means of a virtuous life.

Here, at this stage of the argument, arises the question as to the nature of virtue. To a life of
virtue the Vedantin ascribes the important result of relieving the human soul from its burden of karma. Virtue or good works lead to knowledge, and knowledge leads to salvation. A blind observance of the dicta of religion is useless; and knowledge without works is still worse: "All who worship what is not real knowledge, (who are engaged in works, good though they be), enter into blind darkness; those who delight in real knowledge (without the practice of virtue) enter into greater darkness."* It is only those who know "at the same time both knowledge and non-knowledge"† (virtuous works) that can overcome death and secure salvation. We should realise in the first place the fact that this body is perishable and that virtue alone can lead to 'true knowledge.' But we must also remember that the attainment of true knowledge does not take away the need for a virtuous life. Sages like Janaka did not deem it proper to abandon their duties and responsibilities even though they had ascended up to the highest steps of wisdom. "My body ends in ashes. Om! Mind, remember! Remember thy deeds! Mind, remember! Remember thy deeds!"‡ Such is the solemn adjuration of the Vedantin to his mind. It

* Isa. Up. 9. † ibid. 11. ‡ ibid. 17.
is not to forget itself; nor is it to forget its deeds; and all the while, it should also remember that the "body ends in ashes."

What are the deeds which the mind is thus adjured to remember, and the man to perform? The believers in a personal God have an easy answer to this question. The commandments of the Divine Ruler of man form the bases for the distinction of right and wrong. The followers of Sankara on the other hand to whom the Brahman is not a personal entity distinct from the individual soul, may be supposed to be in a fix in answering this question. Where are they to seek for the foundation of ethical distinctions? The world is an illusion; the human soul is but a temporary sojourner in the physical surroundings of its own creation. But the bonds of karma must be severed; and this can be done only with the help of knowledge, and knowledge can be attained only by good deeds. And it becomes incumbent on them to explain how this is to be accomplished.

We confine our remarks in this article to the teaching on this subject in the Isavasya Upanishad, which gives a brief statement of the Vedanta doctrine of ethics. It consists of but 18 slokas; but in this short compass it gives a clear account of the ethics, acceptable equally to all the three
branches of the Vedantic school of thought. It is unnecessary, as we have said, to dwell upon the ultimate foundation of ethical distinctions in the case of the believers in a personal God. Let us see how the Adwaitin also can secure an efficient basis for the inculcation of virtuous conduct in life.

The Iasvasya Upanishad teaches that man should live, work, know and attain salvation. Life is not to be thrown away by him. The human soul has a goal to win; that goal is, in the view of the Adwaitin, the recognition of its oneness with the Brahman. Though the Jiva is to all appearance only a deluded and shackled toy of the phenomenal world and of karma, it is yet the all-embracing and all-pervasive spirit of the Universe. Into the logical basis of this doctrine it is not our purpose to enter at present. Its ethical aspect alone concerns us here. There is an aspect of the Adwaita theory that places it in a position of advantage ethically. It is the eminence of towering grandeur to which it raises the human soul. It is not simply a spiritual entity exalted above the Universe to the region of eternal bliss. It stands alone and has no second; it is greater than the greatest, and smaller than the smallest. We shall quote here a few of the expressions in which the
Hindu philosopher endeavours to express his conception of the self: "That one moves not; but is swifter than thought. The senses never reached it. It walked before them." Each man may say unto itself: "I am the generator and the destroyer of the entire Universe. Than me there is nothing higher. On me all this Universe is woven, as gems are strung on a string. I am the flavour in the water, the light in the sun and moon. By me the Universe is pervaded. I am the Supreme, the Highest, the Eternal, Unborn and All-pervading." Man is not the mere creature of a God; he is God Himself. He has not simply the image impressed upon him of his Creator; he is himself the Creator. He is the Lord of creation in a sense higher and nobler than that assigned to this expression by the religions of the West.

Will one imbued with such a lofty conception of his soul, condescend to contaminate it with evil in thought, word or action? Will he defile his Atman with base deeds? Nobility of character cannot but come of necessity to a man with so noble an ideal of himself. But as man is constituted at present, before his eyes are opened by true knowledge, when he is not fully conscious of the true glory of his soul; and when "the door of the True is covered with a golden disc,"
how is he to get into the other side of the gates of Heaven? How is he to see the nature of the true? He believes in a good path which would lead him to the attainment of true knowledge; and he believes that virtue and knowledge would lead him on ultimately to Brahma-Sakshatkara. But this life into which the Jiva is thrown by its Karma is not to be despised as it furnishes us with a sphere for the practice of good works, and hence for the destruction of the aggregate of past Karma.

The injunction to the mortal is that "ever doing works here," he should "desire to live a hundred years."* But he performs the works not for his own benefit. "Works will not cling to a man" when he performs them in the right spirit. He secures enjoyment, not by seeking it by means of works, but only by a complete surrender of himself and of his works. "When thou hast surrendered all this, then thou mayest enjoy."†

The Vedántin "beholds all beings in the self, and the self in all beings;"‡ and the human race, nay, all animate existence has its true beings in Brahman. The self should, therefore, be merged in this conception of the oneness or solidarity of

---

*Uṣa Up. 2. †ibid. 1. ‡ibid. 6.
all beings. "Verily, a husband is not dear, that you may love the husband; but that you may love the self, therefore a husband is dear. Verily, a wife is not dear, that you may love the wife; but that you may love the self, therefore a wife is dear."* Here is a basis for the practice of virtue in universal love, before which the injunction that we should love our neighbours as ourselves dwindles into insignificance.

But the main source of ethical light to the Adwaitin is this own inner self. In himself he has an infallible guide along the right path. "Whosoever knows that person, whose dwelling is love, whose sight is the heart, whose mind is light,—the principle of every Self, he indeed is a teacher,"§ The heart of every man is tuned to the promptings of righteousness; he needs no light other than what fills his own mind, and so teacher in virtue other than his own self. Here is the ethical basis in the innermost conscience of the individual for the Vedântin. But human conscience full of self-enlightenment as it is, is yet capable of being thwarted by the bodily environment of the soul. The True abides in the heart. "With the heart we know wht is true...The heart indeed is the Highest Brahman"|| But knowledge

is not virtue. The Jiva, self-enlightened as he is, is yet entangled in the trammels of Avidya. The Jiva consists of desires. "And as his desire, so is his will; and as is his will, so his deed; and whatever deed he does, that he will reap."* Self-abnegation, the sacrifice of what binds or individualizes the jiva, the undoing of desires which enter the heart, this is the road to immortality. "When all desires which once entered his heart are undone, then does the mortal become immortal, then he obtains Brahman."† The subjugation of the misleading impulses in us enables us to overcome evil. Without this self-discipline, knowledge and virtue cannot be possible for us, and evil is not destroyed. "He therefore that knows it, after having become quiet, subdued, satisfied, patient, collected, sees Self in self, sees all as Self."‡ The perception of the oneness of human nature, which is to the Advaitin the ultimate basis of universal love, and hence of ethical conduct, is impossible to the man who is not subdued and collected. "Evil does not overcome him, he overcomes all evil. Evil does not burn him, he burns all evil. Free from evil, free from spots, free from doubt,"§ he attains to the Brahman.

* Brih. Up. 4, 4. † ibid. ‡ ibid. § ibid.
The innate guidance relied upon by the Advaitin should not be taken to mean a disregard of our sacred writings. These are the outward embodiments of the breathings of the Soul; and as such serve to help the blinded Jiva to an easy realisation of its own self-contained light. The fire is there; but it is obscured by the covering of ignorance. And the contact with the light that burns eternally in the Sastras imparts an electric stimulus to the inner spirit of man, and rouses it up to the height of its intrinsic greatness. "As clouds of smoke proceed by themselves out of lighted fire, thus verily, O Maitreyi, has been breathed forth from this great Being what we have as the Vedas, &c."*

The life as a whole should be regarded as a "sacrifice." The conquest over temptations, which have root in our bodily cravings, is man's Diksha,—his preparation to enter upon the life-sacrifice. Its fruits are penance, liberality, righteousness, kindness and truthfulness. And the yagna is completed with death, which is the avabhritha, the closing ceremonial of the sacrifice. A person who enters upon the path laid down in our sacred books, even though he begins with faith alone, is eventually led up to knowledge.

And when good works and knowledge are combined, he is in the right road to salvation.

This is the ethics of the Vedanta built upon the solid foundation of his inner self, strengthened as it may be by a knowledge of the Sastras. The Vedanta philosophy "has not neglected," to quote the words of Prof. Max Muller, "the important sphere of Ethics, but on the contrary, we find Ethics in the beginning, Ethics in the middle, Ethics in the end, to say nothing of the fact that minds so engrossed with divine things as the Vedanta philosophers, are not likely to fall victims to the ordinary temptations of the world, the flesh, and other powers."
THE VEDANTIC DOCTRINE OF
THE FUTURE LIFE.

BY PANDIT SITANATH TATTVABHUSHAN.

1. REBUTATION OF MATERIALISM.

In Hindu Philosophy one misses the elaborate and long-drawn arguments for the immortality of the soul which form a prominent feature of the philosophical Theology of Europe. The explanation of this is no doubt to be found in the general unanimity of Hindu philosophers as regards the doctrine in question. All the six orthodox schools of Hindu Philosophy agree in thinking of the soul as not only immortal, but also as eternal. The heterodox school of Buddhist Philosophy too accepts the doctrine in a modified form. It is only out-and-out Materialists like the Chārvākas that questioned it. There was therefore little occasion for our philosophers spending time and energy in proving that the soul does not perish with the body. But that the Materialist's arguments were not left quite unheeded, appears from controversial passages here and there in Hindu philosophical works,—passages which are
apparently directed against the heretic just mentioned. For instance, in his commentary on the fifty-third and fifty-fourth aphorisms of the third *pūda*, third chapter, of the *Brahmasūtras*, Sankara first states and then argues against the views of the Lokāyatikas or Chārvākas. The aphorisms commented upon occur in a place where no one would expect them, which shows perhaps that they were the result of an after-thought on the part of the author and the little interest he felt in the superficial speculations of the Materialists. I shall, however, give the substance of both the arguments of these philosophers as stated by Sankara and his refutation of those arguments. The reasonings of the Materialists amount to this:

"Though consciousness is hidden in external objects, it becomes manifest in these objects when they form an organism, just as the intoxicating power hidden in certain objects is manifested when they are made into wine. There is, therefore, no soul apart from the body, which is capable of either going to heaven or attaining liberation. The properties of an object are those that exist while it exists and cease to exist in its absence. Heat and light are, in this sense, properties of fire. Now, the vital functions, sensibility, memory and the like, which are believed to be properties of the soul, are found in the body, and not found without the body. They are, therefore, not the properties of an extra-organic object, but really properties of the body."
Sankara's reply, which is an amplification of the aphorisms referred to, is, in substance, this:

"If the properties of the soul are to be set down as properties of the body because they exist while the body exists, why should not they be concluded as such properties of the body for their not existing while the body exists. Form and such other qualities, which are really properties of the body, exist so long as the body exists; but the vital functions and the rest do not exist in the body after death. Besides, form and other properties like it are perceived even by others, but the properties of the soul, sensibility, memory, etc., are not perceived by any one else than the soul to which they belong. Then, again, one knows the existence of these properties in the body while it lives; how can one be sure that at the destruction of one body they are not transmitted to another? Even the possibility of this refutes Materialism. Then, as to the true character of consciousness, the Materialist will perhaps admit that consciousness is the knowledge of matter and material objects. If so, he must also admit that inasmuch as matter and material objects are objects of consciousness, it cannot be their property. For matter to perceive matter is as impossible as it is for fire to burn itself, and for a dancer to climb upon his own shoulders. Form and other properties of matter cannot, we see, make themselves or other properties their objects. Inasmuch, therefore, as consciousness makes both internal and external things its objects, it is not a material property. If its distinction from material objects be admitted, its independence of them must also be admitted. Moreover, its identity
in the midst of changing circumstances proves its eternity. Remembrance and such states of the mind become possible only because the knowing self is recognized as the same in two successive states. Thus, in the consciousness 'I saw this before' the seeing and the recognizing self is known as the same. The argument that because perception takes place while the body exists, therefore it is a property of the body, has already been refuted. It is as valid an argument as that because perception takes place while such materials as lamps, etc., are present, therefore it is a property of lamps, etc. The body is only an instrument of perception like lamps, etc. Nor is the body absolutely necessary even as an instrument of perception, inasmuch as a variety of perceptions takes place in the state of dreaming, when the body is inactive. Thus the existence of the soul as something different from the body, is an irresistible fact.”

II. THE LAW OF Karma.

The other pivot on which the Vedantic doctrine of immortality turns, is the doctrine of Karma,—the doctrine that every action must be followed by its proper effect. This doctrine is sometimes stated in such an abstract shape as to appear like a law of mechanical causality; but really, in its application to rational beings, it has an ethical aspect also. As an ethical law, it lays down, when stated in its broadest form, that every moral action must have a moral effect. In its popular form it prescribes happiness as the result of every virtuous act and suffering of every vicious act. But thus stated,
it looks very much like the Christian doctrine of justice,—the doctrine that every virtuous act deserves happiness as its reward and every vicious act necessitates suffering as its punishment. Reward and punishment are personal acts,—the awards of a personal judge, and the Christian doctrine of justice is necessarily connected with that of such a judge. Hindu thinkers, on the other hand, distinctly deny the personal character of the law of Karma. In the thirty-fourth aphorism of the first pada, second chapter of the Brahmasutras, as well as in the commentary thereon, the results of the moral actions of rational beings are described as irrespective of Divine activity and as dependent on the free activity of individual agents. The Bhagavadgita also says, in the fourteenth verse of its fifth chapter: "The Lord creates neither people's actions nor their agency nor the fruits of their actions; in this matter nature takes its course." Nevertheless, the impersonality of the moral law is not always consistently kept in view by Vedantists, and the same Gita which speaks rather mysteriously, in some places, of nature as a cause other than God, describes the Supreme Being, in other places, as the Dis-penser of Heaven and Hell as reward of virtue and punishment of vice. Even though
we may set down such descriptions as only occasional lapses into popular modes of thought, it must be admitted, on the other hand, that the Vedantic conception of the moral order of the world is not, and could not be purely impersonal. The Universe being the manifestation of a conscious Being, a Being embodying in himself the highest perfections, and the lives of individual rational beings being so many reproductions of the Divine life, ever tending to perfection, the moral order, with all the vicissitudes of rise and fall, suffering and enjoyment, must be held as teleological at the bottom, as having a grand purpose which it is fulfilling, though gradually, at every step. Though not personal, therefore, in the popular sense, the moral order, or in other words, the law of Karma, may be called personal in a higher sense,—in the sense of its fulfilling a Divine purpose. As such, it is a strong proof of the soul's immortality,—its continued moral activity in another sphere of life when one is closed to it. Every moral action, as the law lays down, must have a moral effect. If the effect is pleasant, the pleasantness is only incidental; it must lead to a certain elevation or degradation of the soul, as the case may be, but ultimately to the former,—to moral progress. If the effect is painful, the
pain is only an instrument, like pleasure, for bringing about a certain moral effect. Moral actions, again, have a certain collective effect. They all tend to build a moral character,—a character with fixed tendencies to thoughts, feelings, and actions of a definite nature. Every rational being—and a rational being must be moral by virtue of his possessing reason—has such a character at the time of death, and the law of *Karma* demands that this character must be perpetuated,—must continue to have the effects which exist potentially in the moral forces embodied in it. To suppose a cessation of life and activity at the destruction of the body is, first of all, to suppose a violation of the law of universal causation understood in its broadest sense. The law of causation requires not only that every cause should have an effect, but that the effect should be adequate to the cause. Now, human character is an aggregate of moral causes, moral forces; its effects also should therefore be moral, and there can be no moral effects in the true sense without a conscious personal centre of activity,—without the perpetuation, that is, of the lives of moral agents. Secondly, to suppose an extinction of the soul at the death of the body, is to pronounce rational and moral life as purposeless,—to deny the moral
order of the universe and to conceive it as the play of blind forces. If, therefore, there is a moral order in the universe, if rational life has a purpose, that purpose cannot be anything higher than moral progress,—the attainment of perfection by rational beings; and such a purpose requires the perpetuation of the conscious life of individuals. The gradual elevation of the mere race, to which the moral efforts of individuals contribute,—an idea which seems to satisfy some thinkers,—does not fully meet the requirements of the case. There is no meaning in the elevation of a race unless the individuals composing it are conceived as elevated, and to say that one set of individuals exists in order to contribute to the elevation of another set or generation, is to deny the most essential characteristic of a rational being,—that of its being not an instrument or means to any other being or thing, but an end unto itself. Individuals do indeed contribute to the elevation of other individuals; but to say that an individual lives only for other individuals, is to make everything hopelessly relative, to deny the existence of an absolute end and to eviscerate moral worth of its very essence,—its personal character. We thus see that the law of Karma, understood as just explained, guarantees the perpetuation of the
moral life of every rational being and its gradual progress and final attainment of perfect union with the All-good, the ultimate end of existence.

III. The Law of Evolution Proves Pre-existence.

The next question that concerns us is the form of immortality conceived by the Vedanta. Does the soul remain disembodied in its future life or undergo a process of re-birth? With this question is connected that of the soul's pre-existence, its existence before a particular incarnation. The Vedanta is decidedly of opinion that every individual soul passes through a practically infinite number of incarnations,—incarnations determined by its own moral activity and determining it in turn. The formation of a soul, i.e., of a complex intellectual and moral organism, in the course of a few months or years, it apparently conceives as an impossibility. It will appear so also to the modern intellect if we take a number of most important facts into serious consideration. It is undeniable that we are born with definite intellectual and moral characters. Circumstances indeed affect and contribute to the formation of character; they, however, do not act upon empty minds and souls equal and identical in their blankness, but upon clearly defined moral powers and tendencies of
infinite variety both in quality and quantity. If, in mature life, all formations, whether intellectual or moral, demand a history, an explanation in the form of a series of previous actions, and all differences a difference of history, does not the complexity and variety of endowments with which our present life begins, demand a similar explanation, —a similar history projected into the unknown past? A striking confirmation of the Vedantic doctrine of the soul’s pre-existence is supplied by the theory of evolution now so widely accepted. This theory seems distinctly to militate against the current supposition that the human soul is the work of about nine months’ time. The human body has an almost incalculably longer history behind it. Its present form, with its nice adaptations and its wonderful capacity for multiplying itself, is the result of a series of evolutions extending through millions of years, during which it has passed through innumerable lower and tentative forms. It is a law of Nature that the time required for the evolution of an organism is long in proportion to its richness, niceness and complexity. The human mind, then—the richest, nicest and most complex of organisms,—far from requiring only nine months for its formation, would seem to demand a much longer period than any physical or physiological structure
whatever. The theory of the transmission of acquired powers from father to son, cannot, it seems, go farther than explaining the superior richness and adaptability of the organisms with which succeeding generations are favoured, compared with those possessed by their ancestors. The net result of experience, the acquired niceness of the organism, its fitness for longer action and thought, may be, as it is said to be, transmitted to its reproductions. But unless the favoured organisms are occupied by superior minds, unless the laws that govern physiological evolution are acknowledged as obtaining in the spiritual world also, the current theory of transmitted experience does not seem sufficient to explain the variety and complexity of the human soul at its birth. The direct transmission of powers from one soul to another, and the origin of the soul of the child from that of the father,—suppositions that underlie current thinking on the subject,—are theories without any rational grounds whatever, and are hardly even conceivable. On the other hand, the analogy of physiological evolution points to a parallel process of spiritual evolution,—the gradual development of souls by experience gathered in each life, and their re-birth in fresh lives, the extent of their development determining the quality of the
organisms occupied by them. In these re-incarnations, the souls may be conceived as carrying with them the results of their previous experiences, with the details dropped from memory, but the substantial progress in intellectual and moral power uninterrupted and ready to determine, and be increased by, fresh experience.

IV. What Sleep and Re-waking Proves.

Now, if these considerations help to solve the problem of pre-existence, they also help to solve the allied problem of re-incarnation. But I shall discuss the latter problem a little further. I have, in some of my writings, referred to the phenomena of sleep and re-waking and forgetting and recollecting as having very important bearings on the philosophy of mind, and as facts from which our old Vedantists drew the legitimate conclusions. I shall now show how these phenomena help in solving the problem of re-incarnation. It seems to me that, in relation to this problem, they have a double bearing, (1) they prove the continuance of the contents of the individual consciousness, with all their variety and limitations intact, even without the instrumentality of the body, and (2) they show the necessity of the body for the re-manifestation of these contents after their suspense in death. In profound
dreamless sleep, our individuality, or rather the manifestation of individual life, suffers a partial suspense. The wave that constitutes it seems to return to the ocean. But this temporary suspense of individuality is not a merging, not a total sublation, of difference. The contents of every individual life are maintained intact,—in all their fulness and distinction. There is no loss and no mingling. When the time comes, each individual starts up from the bosom of the Eternal, the ever-waking, with its wealth of conscious life undiminished, with its identity undimmed. Every one gets back what was his own and nothing but his own. There seems to be separate chambers in the Eternal Bosom for each individual to rest soundly and unmolested. Now, this fact seems to prove that the contents of our conscious individual life can exist in the Eternal Consciousness, with their totality and difference intact, even in the absence of the body and its organs. However instrumental our brain-cells and other organs may be in the reproduction of the contents of consciousness in the state of re-waking, they cannot explain their persistence in the hours of sleep; far less can they be identified with those contents. It is not the body—not the brain, not the nerves—that can be said to sustain thought. The contents
of consciousness can be retained only in a conscious being. To say that they can exist in an unconscious form,—in a so-called ‘sub-conscious’ region—is to be actually guilty of a contradiction. Thoughts can persist, can retain their essence and identity, only in a thinking being remaining conscious and self-identical in the midst of change. The reproduction of such contents in us as ‘I am the same being now that I was before,’ ‘this object is the same that I saw yesterday,’ ‘this idea is the same that occurred to me before I slept’ and so on implies that during the temporary lapse of individual life these ideas are retained as ideas and not as anything else in the very Being who is the basis of our lives, a Being who is thus seen to have an eternal, unchanging, ever-conscious aspect of his nature besides his intermittent manifestation as ‘our’ consciousness. As Sankara says in his commentary on the Brahmasutras, II. 2. 31, “Unless there exists one relating principle in the past, present and future, one which is unchangeable and sees all things, the facts of remembrance, recognition etc., which depend upon mental impressions requiring space, time and occasional cause, cannot be explained.”
V. INDIVIDUALITY REQUIRES ORGANISM.

But if the phenomena of sleep and awaking prove the continuance of the individual consciousness in the Universal, and its independence of physical conditions for this continuance, they also prove the dependence of that life on such conditions for its actual manifestation. Sleep indicates the temporary exhaustion of nervous power. When, by continual activity, the nervous system has lost its strength, and requires refreshment from rest, it ceases to work, and the cessation of its activity is accompanied by a temporary suspense of consciousness in its individual manifestation. It is only when the strength of the organs has been restored by sufficient rest, that the flow of thoughts and feelings that constitutes individual life recommences, and the identity and continuity of individual consciousness is re-established. In the waking state also, the health and vigour of mental life are found determined by the soundness and strength of the organism, and injuries to the organs specially connected with the manifestation of consciousness are seen to materially affect the order and vividness of this manifestation. A valid induction from these patent facts is that the re-appearance of individual consciousness after the dissolution of the present body will require a
fresh organism with essentially the same properties. We cannot indeed be absolutely sure that there are no other conditions of the re-manifestation of consciousness than those with which we are acquainted. But in the absence of any proof of the existence of such conditions, we cannot say that there are probably such conditions; nay we can hardly assert even their possibility. It seems barely possible that, as is asserted, at a certain stage of development, individuals acquire the power of disembodying themselves,—extricating themselves from their gross bodies and continuing their conscious lives in a subtle body imperceptible to the senses. That some such environment is required for the individual soul, seems to be axiomatic from its nature as a finite being. The Sukshma Sharira spoken of in our theological books, the body that consists of the five vital airs, the five organs of knowledge in their subtle forms as powers, the five organs of action conceived in the same fashion, and egoity or reflected self-consciousness,—the body which is described as the vehicle of the soul’s migration to the Pitriloka and the Brahmaloka,—the regions of the manes and the Divine regions,—seems to be too fine for the purpose, which it is conceived as fulfilling. For locomotion and activity in space a material
body having extension and parts is necessary, and such a body must be supposed to belong to even the most and richly endowed of souls in the other world. But the evolution of such a fine ethorial body must be conceived to follow the same slowly acting laws that obtain in the region of gross matter, and also to be dependent upon a corresponding growth of spiritual power. Admitting, therefore, the evolution of such a body in extraordinary cases it may be safely laid down that so far as ordinary individual life is concerned, there is not the slightest probability of its reproduction and actual continuance except in connection with an organism similar to that which we possess in our present life.

VI. Ethical Life implies Society, and Society Embodied Beings.

From another point of view, re-incarnation seems to be the most probable form of immortality. The conditions of ethical progress would apparently be absent in a disembodied existence. The ethical life must be social. There is neither morality nor spirituality for an isolated being. Virtue is indeed personal, individual. There is no meaning in the purity of a society in which the individuals are not pure. But the purity of individuals and their continued growth in righteousness imply their
inclusion in a society of which the members owe duties to one another, and in which a free exchange of thoughts and sentiments and an active co-operation in good work are possible. These things are inconceivable in a state of existence in which souls are disembodied; for it is through our bodies that we are able to communicate with one another. The very conditions of that spiritual life, then, which makes immortality necessary and desirable, require that souls should be re-born either in this very world or in others more or less similar to this.

VII. OBJECTION FROM FORGETFULNESS ANSWERED.

An ever recurring objection to the doctrine of pre-existence and re-incarnation is that we have no memory of a previous existence and cannot possibly remember the events of this life if we should be re-born, and that the enjoyment or suffering of the fruits of actions which have passed out of memory, involves an apparent injustice. The phenomena of sleep and re-waking and those of forgetting and recollecting, to which I have already referred, supply an answer to this objection. They prove an important truth which is often overlooked, and the overlooking of which lies at the basis of the objection just mentioned. That truth is;
that by passing out of our memory a fact does not cease to have connection with our mental life, and even to determine it materially. In an independent, self-sustained mind like the divine, the presence or absence of an idea can mean nothing less than its presence or absence in consciousness. If anything could possibly pass out of its cognisance, it would cease to have any existence for it. But this is not true of our finite minds, which are contained in and perpetually sustained by the Infinite. Facts are constantly going out of our individual consciousness and returning to it from the Divine mind, which forms its eternal basis, and in which they are perpetually held. At the present moment, for instance, when I am intent upon writing this paper, how few of the manifold facts of my life are actually present with me! But they are nevertheless determining my present action from the background of my consciousness, in which they lie hidden. How many events have preceded and made it possible! Most of them cannot, by any efforts I may make, be recalled, and will not perhaps revisit my mind any more. Some can be recalled, but are absent now. Others are starting into consciousness from the dark chambers of the mind in which they lay concealed only a few moments back. My present action is, it is clear, due
to a certain permanent form which the mind has taken as the combined effects of these various classes of facts, and to the recurrence of a certain number of them. In the same manner, the moral character which I now possess, and which determines the ethical quality of my present actions is the combined result of a long series of thoughts, feelings and actions many of which have passed entirely out of my consciousness, and many more which may be recalled only with great difficulty. But all these facts are, in a sense, present with me in their effect, i.e., my character, and if I now suffer in consequence of sins committed before, but now forgotten, or enjoy the fruits of righteous conduct equally forgotten, I do not feel myself wronged in the one case or specially favoured in the other. In sound, dreamless sleep, again, the facts of life, as we have already seen, beat a complete retreat from the field of consciousness and leave it utterly empty so far as its individual manifestation is concerned. But they are, by no means, lost in consequence of this temporary disappearance, and do not cease to determine waking life. Now, considered in the light of these facts, the objections to pre-existence and re-incarnation referred to are seen to be groundless. That we have at present no recollection of any previous state of existence, does not,
in the first place, prove that it will never come back to our memory. For aught we know, its reappearance may be waiting for conditions to be hereafter fulfilled. In the second place, even if it should so happen that such facts will never recur to us under any circumstances, it would not follow that they never occurred and are not determining our present life. As we have already seen, the richness and complexity of our minds even at the moment of birth, and their speedy development in definite lines under the varying circumstances of this life, point to a long mental history through which we have passed in the unremembered past. In the third place, if, in our present life, we have to lose and gain constantly in consequence of actions which we have utterly forgotten, but which have, nevertheless left lasting effects on our character, there can be no injustice in our enjoying or suffering the fruits of actions done in previous states of existence, and which, though forgotten now, have yet made us what we are. And finally, it may also be that the few years during which we live in forgetfulness of our past lives are, in proportion to the actual span of our existence, a much shorter period than are our hours of dreamless sleep in proportion to the total extent of our present life. The alleged recollection of
previous states of existence by many persons characterised by uncommon purity of heart, is a subject which I simply mention and pass by; its discussion would be beyond the limited scope of this paper.

VIII. FROM ANIMAL TO MAN.

I shall refer to one more aspect of the Vedantic doctrine of the future life before I close. The law of evolution in the physical and physiological world points, as we have seen, to a similar law in the spiritual world. Does not the same law, we may now ask, testify to the reasonableness of the Vedantic view that the animating principles of all creatures are substantially of the same nature and the transmigration of these principles from one species to another is quite possible? If man's body is linked to, and is the development of, the bodies of the lower animals, where is the unreasonableness of thinking that his soul also has passed through a similar process of gradual development, having animated lower organisms in the more remote periods of its pre-existence, gaining in intelligence and moral strength as it migrated into higher and higher organisms and at last attaining humanity both physically and spiritually? Current European thought draws a hard and fast line between man and the lower animals and practically
sets down the latter as soulless beings. Apart from the progress of philosophical speculation, the recent discoveries of natural historians as regards the highly developed social feelings of some of the lower animals, and the existence in them of sentiments akin to the ethical, have been showing more and more clearly, day by day, the hastiness of such a view, and it now seems impossible to imagine a gap between human consciousness in its lowest forms and the consciousness of the higher brutes. It seems quite probable therefore that psychological science will, in not a very distant future, confirm the anticipations of the Vedanta Philosophy and link together all conscious existence by a law similar to the law of physiological evolution. We shall then see with the eyes of science, as we already see with the eye of intellectual intuition, that the humanity of which we are so proud is an acquisition which has come to us as the result of a long struggle carried on through millions of years, leading us, under the slow but beneficial law of *karma*, through organic and spiritual conditions of an infinitely diverse nature, to that which seems to be the nearest to God. But the reverse process—from humanity to animality—which the old Vedantists seem to have thought as likely as the other, seems to be
quite improbable in the light of both natural and moral science. Progress—from seed to tree, from child to man, from the jelly-fish to the highest mammal, from barbarism to the highest civilisation—is the order of Nature, and so while the teachings of the Vedanta, interpreted scientifically, inspires the hope that we shall one day be gods and partake of the Divine blessedness, they leave no room for the fear that we may one day descend to that brute condition from which we have risen.*

THE VEDANTA—ITS THEORY AND PRACTICE.*

BY SWAMI SARADANANDA.

Our subject this evening is the philosophy of the Vedanta and its application to the life of man. This high system of philosophy was evolved in India thousands of years ago, but it is difficult to determine the precise date it was first evolved. We find its existence long before Buddhism and long before the age of the Ramayana and the Mahabharata, the two great pre-Buddhistic epics of India. By examining all the different religions and sects that exist in India, we find the principles of the Vedanta underlie each one of them. Nay more, the Rishis or seers of thoughts the fathers of the Vedanta claim that its principles underlie all the different religions that exist on the face of the earth and all that will come in future even. The goal which the Vedanta points at is the goal to which all religions, all society, all humanity are rushing toward either consciously or unconsciously, through the process of evolution.

* A lecture delivered in America.
THE VEDANTA—ITS THEORY AND PRACTICE. 109

One great peculiarity of this philosophy is that it is not built around one person or prophet. It is founded on the “latter portion or the knowledge portion of the Vedas,” as the term Vedanta shows. The term Vedas from the Sanskrit root Vid to know, means according to the oldest Hindu commentator, all the super-sensuous knowledge that has been revealed to man up to the present and that which will be in future. And to the books which kept the record of this knowledge, the term Vedas became applied later. Then the Vedic commentator goes on saying that this super-sensuous knowledge might be revealed not only to Hindus but to other people and their experience should be regarded as Vedas also. The Vedas were divided into two great divisions, ‘the work portion’ which teaches man how by the performance of duty, the observance of morality and other acts he might go to heaven, a better place of enjoyment, and ‘the knowledge portion’ which teaches him that not even the enjoyments of heaven should be his aim inasmuch as they too are fleeting and transitory but to go beyond all relativity and find in himself the Divine, the Centre of all Knowledge and Power. Of course it took ages for the Hindu mind to evolve this system of philosophy.
Speaking of philosophy, we must always keep in mind that it never went against religion in India. They always went hand in hand. And religion in order to appeal to man as a whole, should not only appeal to his heart but to his intellect also and therefore must have a sound basis of metaphysics. For is not man a compound being, a combination of reason and emotion and will? Can any religion satisfy him which does not fulfil all his highest aspirations on these fields?

The rapid march of Science and the wonderful discoveries it is making every day by the study of the external and the material world, is striking terror at the hearts of many. They seem to think that the foundation of religion is being undermined day by day and the whole social fabric built on this foundation is in imminent danger. But the seers of old who by their study of the internal world, found the basis of religion, of morality, of duty, and in short of everything in that Unity which forms the background of this universe that ocean of Knowledge and Bliss Absolute from which the Universe has come out, if they were here to-day would have rejoiced to find that instead of undermining, Science is making the basis of religion stronger than ever inasmuch as it is rapidly approaching towards the same goal, the
same Unity. And it must be so; for is not the Universe one connected whole? Is not the division of it into external and internal an arbitrary one? Can we ever know the external *per se*? Then again we speak of the natural laws which govern the external; but are laws anything else than the method or manner in which our mind connects into a link a series of phenomena? This Universe according to the *Vedanta* is one connected mass. Start from the external and you come to the internal and *vice versa*. It has come out of the infinite ocean of Knowledge and Bliss and will go back to it again. It is evolving and involving from all eternity. View it as one unit and it can have no change, motion. It is perfect and all change is within it. For change and motion is only possible when there is comparison, and comparison can only be made between two or more things. Again this chain of evolution and involution, of manifestation and returning, to the unmanifested or seed form of nature can have no beginning in time. To admit a beginning of it would be to admit the beginning of the Creator and not only that but that he must be a cruel and partial Creator, who has produced all these diversities at the outset. Then again there would arise another difficulty, the Creator, the first cause must
either have been perfected or imperfected by the creation. So according to the *Vedanta* the creation is as much eternal as the Creator himself, only it sometimes remains in a manifested state and sometimes in an unmanifested. What then is the purpose, the motive of this creation, this eternal flow of evolution and involution? The answer which the *Vedanta* gives is that it is a play of the Infinite. You cannot ascribe any motive to the perfect, the absolute without making him imperfect. The infinite, the perfect must have no motive to compel it to create. The Infinite must be absolutely free and independent, and the very conception of the finite, the relative implies the existence of the Absolute. The Absolute is the only real existence and the Universe is but a speck in that infinite ocean of Knowledge and Bliss. He is playing with Himself and projecting this world of phenomena. He is appearing through all these masks of imperfection and at the same time He is remaining One and perfect in all splendour and glory. "He vibrates and He does not vibrate, He is far and He is near; He is within all and He is without all this world of phenomena." "As the web-wombed spider projects and takes back the thread as hair grows in the head of a man (without any effort) so this universe comes out of that
Infinite ocean of Knowledge and Bliss and goes back to It again."

Science by tracing the evolution to its cause has arrived at the laws of the survival of the fittest and sexual selection, for the change of one species into another. The *Vedanta* is one with it as regards the truth of the evolution but differs from it inasmuch as it says that the cause of the change of one species into another is the struggle of the Divine within every form, to manifest Itself better and better. As one of our great philosophers has said, in the case of the irrigation of a field, where the tank is placed in a higher level, the water is always trying to rush into the field but is barred by a gate. Upon the gate the water will rush in by its own nature. This struggle of the Divine has produced or evolved higher and higher forms up to the man form. It is going on still and it will be completed only when the Divine will manifest Itself perfectly, without any bars or bolts to hinder Its expression. This highest point of evolution transcends even the conscious existence and so we shall call it the super-conscious existence. This stage of development has been reached by individuals long ago. Christ and Buddha and all the great teachers which the world has produced, attained to that state.
The whole of humanity is approaching towards that unconsciously. But is such a stage possible where the evolution will attain its completion? The Vedanta says it is. Every evolution presupposes an involution. To admit an unending chain of will, will be to conceive motion in a straight line, which modern science has proved to be impossible. But what would take society ages and ages to attain, individuals can attain even in this life and have attained it as proved by the religious history of the world. For what are all the bibles but the records of experiences of men who attained to that stage? Examine them and read between the lines and you will find that the same stage which the Vedanta expresses in the famous aphorism as "Thou art that infinite ocean of Knowledge and Bliss", (Tat tvam asi), is that which was expressed by Buddha as attaining to the Nirvana (perfected state) and by Christ as becoming as perfect as the Father in Heaven and by the Muhammadan Sufis as becoming one with the Truth. The Vedanta claims that this idea of the oneness of man with the Divine, that the real nature of him is Infinite and perfect, is to be found in every religion in India or outside of it; only in some the idea is expressed through mythology and symbology. It claims that what
one man or a few men attained long before is the natural inheritance of all men and every one will attain to it sooner or later. Man therefore according to the Vedanta is Divine and everything that is strong and good powerful in human nature is the expression of the divinity within him.

In this super-conscious existence lies the basis of all ethics. Attempts have been made in the present time to find a permanent basis of morality within the relative to no effect. Every one of us feels within ourselves that morality and unselfishness and doing good to others are good and without these neither the individual nor the nation can develop. Even men standing outside the pale of any religion, are advancing them on utilitarian grounds, that we must do that which brings the greatest amount of good to the greatest number. But if we question why we should do that, why should I look upon my brother as myself and not try to secure the greatest amount of good for myself alone, even at the sacrifice of all else, no plausible answer is given. The answer which the Vedanta gives to this question is that you and I are not separate from this Universe. It is by mistake we think ourselves to be distinct and unconnected entities, independent of one another. All history, all science show that it is just the
opposite, that this Universe is one connected whole, look at it from the external or the internal. There is no break in the external ocean of matter, in which our bodies but represent so many different points. Behind the external there is that one vast ocean of mind, in which our minds but represent so many different whirlpools and behind that is the Soul, the Self, the Absolute and Perfect. Everything in human life points towards this oneness. Our love, our sympathy, kindness, and doing good to others all are but expressions conscious or unconscious of this oneness of man with the universe. Consciously or unconsciously every man feels it; consciously or unconsciously he tries to express it, that he is one with the universal Being and as such every soul and every body his body, that by injuring others he injures himself and by loving others he loves himself.

This gives rise to a subtle but unfounded question. Shall we lose our individuality when we attain the super-conscious stage, the highest point of evolution? The Vedanta questions in its turn, are we individuals as yet in the proper sense of the term? Does individuality mean the changing element in man or does it apply to the unchangeable essence in him? Do you apply the term individuality to the body and mind of man
which is changing every minute? If so there is no occasion for the former question inasmuch as we are losing or changing our individuality very minute of our existence. Think what great changes have we, each one of us, undergone since we were born, think what a change for the wicked when he becomes a good member of society, or the primitive man when he becomes civilized, or think what great change of a barbarous individuality when through the process evolution the ape form changes into the man form? Do we lament the change of individuality, in these cases? The Vedanta says by developing your individuality, you rise to a point where you become a perfect individual. You change your apparent present individuality for a better and real one. The process of evolution is from lawlessness through law, beyond law, from the unconscious through the conscious beyond the conscious. Our conscious existence, where every action is accompanied with a feeling of egoity does not cover the whole of our existence. During sleep or in performing actions which are known as the automatic actions, there is no feeling of egoity present and yet we do exist, though we enter a stage which is below the conscious and inferior to it. In the highest stage of development
also there is no feeling of egoity but it is infinitely superior to the conscious. Apparently in a superficial view the highest and the lowest stages of development seem to be one and the same but there is as much difference between the two as between darkness produced by the want of light and darkness produced by the excess of light and known in science as the polarisation of light. There is an illiterate and ignorant man, he enters, and comes out a sage, a prophet, a great seer of thought. He discovers in himself the eternal fountain-head of all knowledge and power; he finds the kingdom of heaven within. "For him," say the Vedas, "all doubts (and hankerings) vanish for ever and all selfish knots of the heart are cut asunder, the endless chain of cause and effect fades and dies for him who attains the Highest."

This attaining the super-conscious existence has been described in many religions as seeing and realising and feeling God. The rapid march of reason has proved beyond a doubt that all our ideas of God are perfectly anthropomorphic, that we are creating our own God and worshipping and paying reverence to our own mental representation. What is the necessity then of worshipping God? Why shall I worship my own mental creation? The history of evolution shows how the idea of God grows
and develops with the growth of the man. Low from fetishism and animism he comes to polytheism and thence to monotheism. Suggested by his own dreams or the love of his dead ancestors, or the stupendous forces in nature the idea of a future existence dawns in his infant mind and he tries to peep behind the screen of the senses. How in his search after the super-sensuous, he comes up gradually through the stages of ancestor-worship and nature-worship, to the recognition of many spirits or gods behind all the different mighty forces of nature and lastly how he comes to the conception of one supreme ruler at the head of these different gods and pays his homage to Him. Reason will say that although this worship of the super-sensuous was a great motive power in bringing out his powers and developing his mind, yet all this time he has been worshipping his own mental creations and now that his eyes have been opened he ought to discard all these mistaken ideas of God. The Vedanta does not deny that all these different ideas of God are anthropomorphic but it asks in its turn are not all our ideas of the external the same? Can we ever know the world but as our mind represents it to us and has not science proved already that the senses are deceptive and can never know things as they are? There-
fore if it is reasonable to reject all our ideas of God because they are anthropomorphic, it is reasonable also to throw away every other idea from the mind, but how many of us are willing to do so and have the power of doing so? Then again though all that we know of anything are what our minds represent them to be yet they help us in developing ourselves, and bringing us higher and higher. Then lastly what the Vedanta has to say in this point is that man is not wrong or mistaken in his worshipping all these different ideas of God, only he has been travelling from lower to higher truths. His progress in this world is not from error to truth but from lower and lower truths to higher and higher ones. Everything in this world even truth itself is relative. What is truth for one state of things or one plane of existence is not truth for another state or another plane and the different ideas of God are nothing less than the different views of the Absolute, the Infinite from different planes of the relative. Supposing for instance we make a journey to the Sun, our view of the Sun changes every minute we proceed. With every step in advance we see newer and newer vision of the same Sun. The Sun which appeared to be a bright little disc grows larger and larger till at last
when we reach the Sun itself, we see the Sun in its entirety. We know the Sun as it is. The Sun has not changed all the time but our views of it have changed till at last we got the full view of the luminary. This is the progress of man towards the Infinite. His view of the Infinite has never become perfectly nil but through the limitations of his senses, his intellect and all, he sees only a little bit of the Infinite and worships it as God. The fault is not with the Infinite but with his own limited faculties. As he grows, these limitations become less and less and he sees the Infinite better and better at last all his limitations fade away as mists before the rising Sun and he grasps the Infinite in its entirety; he discovers in himself the Infinite ocean of Knowledge and Bliss. This has been beautifully expressed in the Vedas. "Two birds of bright golden plumage, inseparable companions of each other are sitting on the same tree, the one on the higher and the other on the lower branches of it." The upper bird not caring to taste the sweet and bitter fruits of the tree, sits majestic in his own glory and sees the lower one tasting the fruits. As the lower bird gets the taste of the bitter fruit of the tree he grows disgusted and looks up to the splendid vision above him of
the upper bird and draws himself nearer to him. He forgets again the glorious vision in his love for the fruits of the tree and goes on tasting them as before till he tastes another bitter fruit. He grows disgusted again and advances a little more towards the bright vision before him. So on he advances till at last when he reaches the upper bird, the whole vision changes and he finds himself to be the upper bird who was sitting in all splendour, and majesty all the time.

The goal being thus the same in all religions, the Vedanta has no quarrel with any. It looks upon all the different religions as so many different ways for attaining that One, indivisible ocean of Knowledge and Bliss. "As the different rivers, having their sources in different mountains, roll down through crooked or straight paths and at last come into the ocean—so all these various creeds and religions taking their start from different standpoints and running through crooked or straight courses, at last come unto Thee Oh, Lord." The Vedanta condemns no body for it looks upon man not as he is at the present moment but what he really is. It teaches that sooner or later every man will discover his real nature and will know himself as the source of all knowledge, power and bliss. Will or nil every man
is advancing towards that through every act that he is doing here. The worker by doing good to others, the philosopher by developing his reason, the lover of God by developing and directing his emotions all, all will attain the super-conscious plane, the highest stage of development. What if a man be an atheist or agnostic? The question is, is he sincere and is he ready to sacrifice himself for the good of others and for the truth that he has known? The Vedanta says there is no fear for him. He will come to higher and higher truths and ultimately attain the highest. Allow infinite variation in religious thoughts. Follow your own but do not try to bring everybody to the same opinion. It can never be, for is not unity in diversity the law of nature? And is not the goal the same though the roads are different? Do not make yourself the standard for the universe but know that Unity forms the background of this universe and whatever way man might travel at last he will arrive at that.
THE VEDANTA FOR THE WORLD.*

Religion—our life principle.

A very small amount of religious work performed brings a very large amount of result”—are the eternal words of the author of the Gita, and if that statement wanted an illustration, in my humble life I am finding everyday the truth of that great saying. My work, gentlemen of Kumbakonam, has been very insignificant indeed, but the kindness and the cordiality of welcome that have met me at every step of my journey from Colombo to this city are simply beyond all expectation. Yet, at the same time, it is worthy of our traditions as Hindus, it is worthy of our race; for here we are the Hindu race, whose vitality, whose life-principle, whose very soul, as it were, is in religion. I have seen a little of the world, traveling among the races of the West and the East; and everywhere I find among nations one great ideal, which forms the backbone, so to speak,

* Speech by Swami Vivekananda at Kumbakonam, Madras on his return in 1897 from the Chicago Parliament of Religions.
of that race. With some it is politics, with others it is social culture; others again have intellectual culture and so on for their national background. But this, our mother-land, has religion and religion alone for its basis, for its backbone, for the bedrock upon which the whole building of its life has been based. Some of you may remember that in my reply to the kind address which the people of Madras sent over to me in America, I pointed out the fact that a peasant in India has, in many respects, a better religious education than many a gentleman in the West, and to-day, beyond all doubt, I myself am verifying my own words. There was a time when I would feel rather discontented at the want of information among the masses of India, and the lack of thirst among them for information, but now I understand it. Where their interest lies they are more eager for information than the masses of any other race that I have seen or have travelled among. Ask our peasants about the momentous political changes in Europe, the upheavals that are going on in European society. They do not know anything of these, nor do they care to know; but those very peasants, —even in Ceylon, detached from India in many ways, cut off from a living interest in India—I found the very peasants working in the fields there
had already known that there was a Parliament of Religions in America, and that one of their men had gone over there, and that he had some success. Where, therefore, their interest is, there they are as eager for information as any other race; and religion is the one and the sole interest of the people in India. I am not just now discussing whether it is good to have the vitality of the race in religious ideals or in political ideals, but so far it is clear to us, that for good or for evil our vitality is concentrated in our religion. You cannot change it. You cannot destroy one thing and put in its place another. You cannot transplant a large growing tree from one soil to another and make it immediately take root here. For good or for evil the religious ideal has been flowing into India for thousands of years, for good or evil the Indian atmosphere has been filled with ideals of religion for shining scores of centuries, for good or evil we have been born and brought up in the very midst of these ideals of religion, till it has entered into our very blood, and tingles with every drop of it in our veins, and has become one with our constitution, become the very vitality of our lives. Can you give such a religion up without the rousing of the same energy in reaction, without filling the channel which that mighty river has
cut out for itself in the course of thousands of years? Do you want that the Ganges should go back to its icy bed and begin a new course? Even if that were possible, it would be impossible for this country to give up her characteristic course of religious life and take up a new career of politics or something else for herself. You can only work under the law of least resistance, and this religious line is the line of least resistance in India. This is the line of life, this is the line of growth, and this is the line of well-being in India—to follow the track of religion.

THIS WORLD—THE GOAL OF OTHERS.

Aye, in other countries religion is only one of the many necessities in life. To use a common illustration which I am in the habit of using, my lady has many things in her parlour, and it is the fashion now-a-days to have a Japanese vase, and she must procure it; it does not look well without it. So my lady, or my gentleman, has many other occupations in life; a little bit of religion also must come in to complete it. Consequently she has little religion. Politics, social improvement, in one word, this world, is the goal of the rest of mankind, and God and religion come in quietly as the helpers out of the world; their God is, so to speak, the being who helps to cleanse and to
furnish this world of ours;—that is apparently all the value of God for them. Do you not know how for the last hundred or two hundred years you have been hearing again and again out of the lips of men who ought to have known better, from the mouths of those who pretend, at least, to know better, that all the arguments they produce against this Indian religion of ours is this,—that our religion does not conduce to well-being in this world, that it does not bring to us handfuls of gold, that it does not make robbers of nations, that it does not make the strong stand upon the bodies of the weak, and feed themselves with the life's blood of the weak. Certainly our religion does not do that. It cannot march cohorts, under whose feet the earth trembles, for the purpose of destruction and pillage and the ruination of races. Therefore they say—what is there in this religion? It does not bring any grist to the grinding mill, any strength to the muscles; what is there in such a religion?  

OURS THE ONLY TRUE RELIGION, BECAUSE IT GOES BEYOND THIS WORLD AND TEACHES RENUNCIATION.

They little dream that that is the very argument with which we prove our religion to be good and true. Ours is the true religion because it
does not make for this world. Ours is the only true religion because this little sense-world of three days' duration is not to be, according to it, the end and aim of all, is not to be our great goal. This little earthly horizon of a few feet is not that which bounds the view of our religion. Ours is away beyond, and still beyond; beyond the senses, beyond space, and beyond time, away, away beyond, till nothing of this world is left there and the universe itself becomes like one drop in the transcendent ocean of the glory of the soul. Ours is the true religion because it teaches that God alone is true, and that this world is false and fleeting, and that all your gold is dust, and that all your power is finite, and that life itself is often-times an evil; therefore it is that ours is the true religion. Ours is the true religion, because, above all, it teaches renunciation, and stands up with the wisdom of ages to tell and to declare to the nations who are mere children of yesterday in comparison with the hoary antiquity of the wisdom that our ancestors have discovered for us here in India—to tell them in plain words, "Children, you are slaves of the senses; there is only finiteness in the senses; there is only ruination in the senses; the three short days of luxury here bring only ruin at last. Give it all up, renounce the love
of the senses and of the world; that is the way of religion." Through renunciation is the way to the goal and not through enjoyment. Therefore, ours is the only true religion. Aye, it is a curious fact that, while nations after nations have come upon the stage of the world, played their parts vigorously for a few moments and died almost without leaving a mark or a ripple on the ocean of time, here we are, living, as it were, an eternal life. They talk a great deal of the new theories about the survival of the fittest, and they think that it is the strength of the muscles which is the fittest to survive. If that were true, any one of the aggressively known old-world nations would have lived in glory to-day, and we, the weak Hindus—an English young lady once told me, what have the Hindus done; they never even conquered one single race!—even this race, which never conquered even one other race or nation, lives here three hundred million strong. And it is not all true all its energies are spent, that atavism has seized upon every bit of its body;—that is not true. There is vitality enough, and it comes out in torrents and deluges when the time is ripe and requires it. We have, as it were, thrown a challenge to the whole world from the most
ancient times. In the West they are trying to solve the problem how much a man can possess, and we are trying here to solve the problem on how little a man can live. This struggle and this difference has to go on still for some centuries. But if history has any truth in it, and if prognostications ever prove true, it must be that those who train themselves to live on the least supply of things and to control themselves well, will in the end gain the battle, and that all those who run after enjoyment and luxury, however vigorous they may seem for the moment, will have to die and become annihilated.

THE VEDANTA ALONE CAN CURE THE EVILS OF THE WEST.

There are times in the history of a man's life, nay in the history of the lives of nations, when a sort of world-weariness becomes painfully predominant. It seems that such a tide of world-weariness has come upon the Western World. There too they have their thinkers, great men; and they are already finding out that it is all vanity of vanities, this race after gold and power; many, nay most, cultured men and women there are already weary of this competition, this struggle, this brutality of their commercial civilisation, and they are looking forward towards something better. There is a class
which still clings on to political and social changes as the only panaceas for the evils in Europe, but among the great thinkers there other ideals are growing. They have found out that no amount of political or social manipulation of human conditions can cure the evils of life. It is a change of the soul itself for the better that alone will cure the evils of life. No amount of force, or government, or legislative cruelty, will change the conditions of a race, but it is spiritual culture and ethical culture alone that can change wrong racial tendencies for the better. Thus, these races of the West are eager for some new thought, for some new philosophy; the religion they have had, Christianity, although imperfectly understood and good and glorious in many respects, is, as understood hitherto, found to be insufficient. The thoughtful men of the West find in our ancient philosophy, especially in the Vedanta, the new impulse of thought they are seeking, the very spiritual food and drink they are hungering and thirsting for. And it is no wonder.

**THE VEDANTA ALONE IS THE UNIVERSAL RELIGION FOR MANKIND.**

I have become used to hear all sorts of wonderful claims put forward in favour of every religion under the sun. You have also heard, quite within
recent times, claims put forward in favour of Christianity by a great friend of mine, Dr. Barrows; that Christianity is the only universal religion. Let me consider this question a while and lay before you my reasons why I think that it is the Vedanta; and the Vedanta alone that can become the universal religion of man, and that none else is fitted for that role.

For it is not built round the life of any personal founder.

Excepting our own, almost all the other great religions in the world are inevitably connected with the life or lives of one or more founders. All their theories, their teachings, their doctrines, and their ethics are built round the life of a personal founder from whom they get their sanction, their authority, and their power; and strangely enough upon the historicality of the founder's life is built, as it were, all the fabric of such religions. If there is one blow dealt to the historicality of that life as has been the case in modern times with the lives of almost all the so-called founders of religion—we know that half of the details of such lives is not now seriously believed in and that the other half is seriously doubted—if this becomes the case, if that rock of historicality, as they pretend to call it, is shaken and shivered,
the whole building tumbles down, broken absolutely, never to regain its lost status. Everyone of the great religions in the world excepting our own, is built upon such historical characters; but ours rests upon principles. There is no man or woman who can claim to have created the Vedas. They are the embodiment of eternal principles; sages discovered them; and now and then the names of these sages are mentioned, just their names; we do not even know who or what they were. In many cases we do not know who their fathers were, and almost in every case we do not know when and where they were born. But what cared they, these sages, for their names? They were the preachers of principles, and they themselves, as far as they went, tried to become illustrations of the principles they preached. At the same time, just as our God is an impersonal, and yet a personal God, so is our religion a most intensely impersonal one, a religion based upon principles, and yet it has an infinite scope for the play of persons; for what religion gives you more incarnations, more prophets and seers and still waits for infinitely more? Says the Bhagavad Gita that Incarnations are infinite, leaving ample scope for as many as you like to come. Therefore if any one or more of these persons in India's
religion, any one or more of these Incarnations, and any one or more of our prophets, are proved not to have been historical, it does not injure our religion a bit; even then it remains there firm as ever, because it is based upon principles, and not on persons. It is vain to try to gather all the peoples of the world around a single personality. It is difficult to make them gather together even around eternal and universal principles. If it ever becomes possible to bring the largest portion of humanity to one way of thinking in regard to religion, mark you, it must be always through principles and not through persons. Yet, as I have said, our religion has ample scope for the authority and influence of persons. There is that most wonderful theory of Ishta, which gives you the fullest and the freest choice possible among these great religious personalities. You may take up any one of the prophets or teachers as your guide and the object of your special adoration; you are even allowed to think that he whom you have chosen is the greatest of the prophets, the greatest of all the Avataras; there is no harm in that, but you must keep on a firm background of eternally true principles. The strange fact is here, that the power of our Incarnations has been holding good
with us only so far as they are illustrations of the principles in the Vedas. The glory of Sri Krishna is that he has been the best preacher of our eternal religion of principles and the best commentator on the Vedanta that ever lived in India.

It is in harmony with science.

The second claim of the Vedanta upon the attention of the world is that, of all the scriptures in the world, it is the one scripture the teaching of which is in entire harmony with the result that have been attained by the modern scientific investigations of external nature. Two minds in the dim past of history, cognate to each other in form and kinship, and sympathy started being placed in different circumstances, for the same goal through different routes. The one was the ancient Hindu mind and the other the ancient Greek mind. The latter started in search of that goal beyond by analysing the external world. The former started by analysing the internal world. And even through the various vicissitudes of their history it is easy to make out these two vibrations of thought tending to produce similar echoes from the goal beyond. It seems clear that the conclusions of modern materialistic science can be acceptable, harmoniously with their religion, only
to the *Vedantins*, or Hindus as they call them. It seems clear that modern materialism can hold its own and at the same time approach spirituality by taking up the conclusions of the *Vedanta*. It seems to us, and to all who care to know, that the conclusions of modern science are the very conclusions the *Vedanta* reached ages ago; only in modern science they are written in the language of matter. This, then, is another claim of the *Vedanta* upon modern Western minds, its rationality, the wonderful rationalism of the *Vedanta*. I have myself been told by some of the best scientific minds of the day in the West how wonderfully rational the conclusions of the *Vedanta* are. I know one of them personally who scarcely has time to eat his meals, or go out of his laboratory, and who yet would stand by the hour to attend my lectures on the *Vedanta*; for, as he expresses it, they are so scientific, they so exactly harmonise with the aspirations of the age and with the conclusions which modern science is coming to at the present time. Two such scientific conclusions drawn from *Comparative Religion*, I would specially like to draw your attention to; the one bears upon the idea of the universality of religions, and the other on the idea of the oneness of things.
UNIVERSALITIES OF RELIGIONS AND TOLERATION
RECOGNISED BY THE VEDANTA ALONE.

We observe in the histories of Babylon and among the Jews an interesting religious phenomenon happening. We find that each of these Babylonian and Jewish peoples were divided into so many tribes, each tribe having a god of its own, and that these little tribal Gods had often a generic name. The gods among the Babylonians were all called Baals, and among them Baal Merodac was the chief. In course of time one of these many tribes would conquer and assimilate the other racially allied tribes, and the natural result would be that the God of the conquering tribe would be placed at the head of all the gods of the other tribes. Thus the so-called boasted monotheism of the Semites was created. Among the Jews the gods went by the name of Moloch. Of these there was one Moloch which belonged to the tribe called Israel, and he was called the Moloch Yahva, or Moloch Yava. Then this tribe of Israel slowly conquered some of the other tribes of the same race, destroyed their Molochs, and declared its own Moloch to be the Supreme Moloch of all the Molochs. And I am sure most of you know the amount of bloodshed, of tyranny, and of brutal savagery, that this religious conquest entailed. Later
on the Babylonians tried to destroy this supremacy of Moloch Yahuva, but could not succeed. It seems to me that such an attempt at tribal self-assertion in religious matters might have taken place on the frontiers of India also. Here too all the various tribes of the Aryans might have come into conflict with one another for declaring the supremacy of their several tribal gods; but India's history was to be otherwise, was to be different from that of the Jews. India was to be alone the land—of all lands—of toleration and of spirituality, and therefore the fight between tribes and their gods did not take place long here; for one of the greatest sages that was ever born anywhere found out here in India even at that distant time—which history cannot reach—tradition itself dares not to peep into the gloom of that past when the sage arose—and declared, "He who exists is one; the sages call Him variously"—Ekam sat vipra bahudha vadanti—one of the most memorable sentences that was ever uttered, one of the grandest of truths that was ever discovered; and for us Hindus this truth has been the very backbone of our national existence. For throughout the vistas of the centuries of our national life this one idea, Ekam sat vipra bahudha vadanti, comes down, gaining strength and vigour as it rolls along, gaining in volume and
in fulness till it has permeated the whole of our national existence, till it is mingled in our blood, and has become one with us in every grain. We love that grand truth in every grain and our country has become the glorious land of religious toleration. It is here and here alone that they build temples and churches for the religions which have come in with the object of condemning our own religion. This is one very great principle that the world is waiting to learn from us. Aye, you little know how much of intolerance is yet abroad. It struck me more than once that I would have to leave my bones on foreign shores owing to the prevalence of religious intolerance. Killing a man is nothing for religion's sake; to-morrow they may do it in the very heart of the boasted civilisation of the West, if to-day they are not really doing so. Out-casting in its most horrible forms would often come down upon the head of a man in the West, if he dared to say a word against his country's accepted religion. They talk glibly and smoothly here in criticism of our caste laws. If you go to the West and live there as I have done, you will know that even the biggest professors you hear of are arrant cowards and dare not tell, for fear of public opinion, a hundredth part of what they hold to be really true in religious matters.
Therefore the world is waiting for this grand idea of universal toleration. It will be a great acquisition to civilisation. Nay, no civilisation can exist long unless this idea enters it. No civilisation can go on growing before fanaticism stops and bloodshed stops and brutality stops. No civilisation can begin to lift up its head until we look charitably upon each other, and the first step towards that much needed charity is to look charitably and kindly upon the religious convictions of each other. Nay more, to understand that, not only should we be charitable towards each other, but positively helpful to each other, however different our religious ideas and convictions may be. And that is exactly what we in India do, as I have just related to you. It is here in India that Hindus have built and are still building churches for Christians, and mosques for Mohamedans. That is the thing to do. In spite of their hatred, in spite of their brutality, in spite of their cruelty, in spite of their tyranny, and in spite of the filthy language they are always given to uttering, we will and we must go on building churches for the Christians and mosques for the Mohamedans till we conquer through love—till we have demonstrated to the world that love alone is the fittest thing to survive
and not hatred, that it is gentleness that has the strength to live on and to fructify, but not mere brutality and physical force.

THE SPIRITUAL ONENESS OF THE WHOLE UNIVERSE.

The other great idea that the world wants from us to-day, the thinking part of Europe and the whole world—more, perhaps, the lower classes than the higher, more the masses than the cultured, more the ignorant than the educated, more the weak than the strong—is that eternal grand idea of the spiritual oneness of the whole universe. I need not tell you to-day, men from this Madras University, how the modern researches of Europe have demonstrated through physical means the oneness and the solidarity of the whole universe, how, physically speaking, you and I, the sun and the moon and the stars, are all but little waves or wavelets in the midst of an infinite ocean of matter, and how Indian psychology had demonstrated ages ago that, similarly, both body and mind are but mere names or little wavelets in the ocean of matter,—the Samashti, and how, going one step further, it is shown in the Vedanta that, behind that idea of the unity of the whole show, the real soul is also one. There is but one Soul throughout the universe, all is but one existence. This great idea of the real and basic solidarity of the
whole universe has frightened many, even in this country; it even now finds sometimes more opponents than adherents; I tell you, nevertheless, that it is the one great life-giving idea which the world wants from us to-day and which the mute masses of India want for their uplifting, for none can regenerate this land of ours without the practical application and effective operation of this ideal of the oneness of things. The rational West is earnestly bent upon seeking out the rationality, the raison d'être of all its philosophy and its ethics; and you all know well that ethics cannot be derived from the mere sanction of any personage, however great and divine he may have been,—of one who having been born but yesterday has had to die a few minutes after. Such an explanation of the authority of ethics no more appeals to the highest of the world's thinkers; they want something more than human sanction for ethical and moral codes to be binding, they want some eternal principle of truth as the sanction of ethics. And where is that eternal sanction to be found except in the only infinite reality that exists, in you and in me and in all, in the self, in the Soul? The infinite oneness of the soul is the eternal sanction of all morality, that you and I are not only
brothers—even literature voicing man's struggle towards freedom, children have preached that for you—but that you and I are really one. This is the dictate of Indian philosophy. This oneness is the rationale of all ethics and all spirituality. Europe wants it to-day just as much as our down-trodden masses do, and this great principle is even now unconsciously forming the basis of all the latest political and social aspirations that are coming up in England, in Germany, in France, and in America. And mark it, my friends, that in and through all the literature voicing man's struggle towards freedom, towards universal freedom, again and again you find the Indian Vedantic ideals coming out prominently. In some cases the writers do not know the source of their inspiration, in some cases they try to appear very original, and a few there are bold and grateful enough to mention the source and acknowledge their indebtedness to it.

FAITH IN OURSELVES—THE SECRET OF ALL GREATNESS.

My friends, when I was in America, I heard it once complained that I was preaching too much of Advaita, and too little of Dualism. Aye! I know what grandeur, what oceans of love, what infinite, ecstatic blessings and joy there are in the
dualistic 

I know it all. But this is not the time with us to weep even in joy; we have had weeping enough; no more is this the time for us to become soft. This softness has been on us till we are dead; we have become like masses of cotton. What our country now wants are muscles of iron and nerves of steel, gigantic wills which nothing can resist, which can penetrate into the mysteries and the secrets of the universe, and will accomplish their purpose even if it meant going down to the bottom of the ocean and meeting death face to face in every fashion. That is what we want, and that can only be created, established and strengthened by understanding and realising the ideal of the Advaita, that ideal of the oneness of all. Faith, faith, faith in ourselves, faith, faith in God, this is the secret of greatness. If you have faith in all the 330 millions of your mythological gods and in all the gods which foreigners have now and again sent into your midst, and still have no faith in yourselves, there is no salvation for you. Have faith in yourselves, and stand up on that faith and be strong; that is what we need. Why is it that we 300 millions of people have been ruled for the last one thousand years by any and every handful
of foreigners who chose to walk over our prostrate bodies? Because they had faith in themselves and we had not. What did I learn in the West, and what did I see behind those talks of frothy nonsense of the Christian religious sects saying that man was a fallen and hopelessly fallen sinner? There, inside the national hearts of both Europe and America resides the tremendous power of the men's faith in themselves. An English boy will tell you—"I am an Englishman, and I will do anything." The American boy will tell you the same, and so will every European boy. Can our boys say the same thing here? No, not even the boys' fathers. We have lost faith in ourselves. Therefore to preach the Advaita aspect of the Vedanta is necessary to rouse up the hearts of men, to show them the glory of their souls. It is therefore that I preach this Advaita, and I do so not as a sectarian but upon universal and widely acceptable grounds.

THERE IS DIVINITY RESIDING IN EVERY THING.

It is easy to find out the way of reconciliation that will not hurt the dualist or the qualified monist. There is not one system in India which does not hold the doctrine that God is within, that divinity resides within all things. Every one of our Vedantic systems admits that all purity and
perfection and strength are in the soul already. According to some this perfection sometimes becomes, as it were, contracted, and at other times it becomes expanded again. Yet it is there. According to the Advaita it neither contracts nor expands, but becomes hidden and uncovered now and again. Pretty much the same thing in effect. The one may be a more logical statement than the other, but as to the result, the practical conclusions, both are about the same; and this is the one central idea which the world stands in need of, and nowhere is the want more felt than in this, our own motherland.

Ourselves responsible for all our miseries.

Aye, my friends! I must tell you a few harsh words. I read in the newspapers, when one of our poor fellows is murdered or ill-treated by an Englishman, how the howls go all over the country; I read and weep, and the next moment comes to my mind the question who is responsible for it all. As a Vedantist I cannot but put that question to myself. The Hindu is a man of introspection, he wants to see things in and through himself, through the subjective vision. I therefore ask myself who is responsible, and the answer comes every time, "Not the English,—No! they are not responsible. It is we who are responsible for all
our misery and all our degradation, and we alone are responsible." Our aristocratic ancestors went on treading the common masses of our country under foot, till they became helpless, till under this torment the poor, poor people nearly forgot that they were human beings. They have been compelled to be merely hewers of wood and drawers of water for centuries, so much so that they are made to believe that they are born as slaves, born to be hewers of wood and drawers of water. And if anybody says a kind word for them; with all our boasted education of modern times, I often find our men shrink at once from the duty of lifting up the down-trodden. 

HEREDITY NO ARGUMENT TO PROVE OUR WEAKNESS.

Not only so, but I also find that all sorts of most demoniacal and brutal arguments, called from the crude ideas of hereditary transmission and other such gibberish from the Western world, are brought forward in order to brutalise and tyrannise over the poor all the more. In the Parliament of Religions in America there came among others a young man, a Negro-born, a real African Negro, and he made a beautiful speech. I became interested in the young man, and now and then talked to him, but I could learn nothing about him. But one day in England I met some Americans,
and this is what they told me—that this boy was the son of a Negro chief in the heart of Africa, and that one day another chief became angry with the father of this boy and murdered him and murdered the mother also to be cooked and eaten, and that he ordered the child also to be cooked and eaten; but that the boy fled and after passing through great hardships, travelling through a distance of several hundreds of miles, he reached the sea-shore, and that there, he was taken into an American vessel and brought over to America. And this boy made that speech! After that, what was I to think of your doctrine of heredity?

"Proclaim the God in you and be great, . . . .

Aye, Brahmin!—If the Brahmin has more aptitude for learning on the ground of heredity than the Pariah, spend no more money on the Brahmin's education, but spend all on the Pariah. Give to the weak; for there all the gift is needed.

If the Brahmin is born clever, he can educate himself without help. If the others are not born clever, let them have all the teaching and the teachers they want. This is justice and reason as I understand. These, our poor people, therefore, require to hear and to know what they really are, these down-trodden masses of India. Yes, let every man and woman and child, without respect
of caste or birth or weakness or strength, bear
and know that behind the strong and the weak,
behind the high and the low, behind every one,
there is that Infinite Soul assuring the infinite
possibility and the infinite capacity of all to
become great and good. Let us proclaim to
every soul—Uttishhata Jagrata, prapa ya varan
nibodhata—“Arise, awake and stop not till the
goal is reached.” Arise, awake; and stop not till
the goal is reached.” Arise, awake; awake from
this hypnotism of weakness. None is really weak;
the soul is infinite, omnipotent, and omniscient.
Stand up, assert yourself, proclaim the God within
you, do not deny. Too much of inactivity, too
much of weakness, too much of hypnotism, has
been and is upon our race. O ye modern Hindus,
dehypnotise yourselves. The way to do that is
found in your own sacred books. Teach your-
selves, teach every one his real nature, call
upon the sleeping soul to see how it rises.
Power will come, glory will come, goodness will
come, purity will come, and every thing that
is excellent will come when this sleeping Soul
is roused to self-conscious activity. Aye, if
there is anything in the Gita that I like, it is
these two verses, coming out strong, as the very
gist, the very essence of Krishna’s teaching—“He
who sees the Supreme Lord dwelling alike in all beings, the Imperishable in things that perish, sees indeed. For seeing the Lord as the same, every-where present, he does not destroy the Self by the Self, and then he goes to the highest goal."

GROWTH, EXPANSION AND DEVELOPMENT ON NATIONAL LINES.

Thus there is a great opening for the Vedanta to do beneficent work both here and elsewhere. This wonderful idea of the sameness and omnipresence of the Supreme Soul has to be preached for the amelioration and elevation of the human race, here as elsewhere,—wherever there is evil and wherever there is ignorance and want of knowledge. I have found out in my experience that, as our scriptures say, all evil comes by relying upon differences, and that all good comes from faith in equality, in the underlying sameness and real oneness of things. This is the great Vedantic ideal. To have the ideal is one thing, and to apply it practically to the details of daily life is quite another thing in every case. It is very good to point out an ideal, but where is the practical way to reach it? Here naturally comes the difficult question which has been uppermost for centuries in the minds of our people, the vexed question of caste and of social reformation
I must frankly let this audience know that I am neither a caste-breaker nor a mere social reformer. I have nothing to do directly with your castes or with social reformation. Live in any caste you like, but that is no reason why you should hate another caste or another man. It is love and love alone that I preach, and I base my teaching on the great Vedantic truth of the sameness and omnipresence of the Soul of the Universe. For the last one hundred years nearly, our country has been flooded with social reformers and various social reform proposals. Personally I have no fault to find with these reformers. Most of them are good well-meaning men, and their aims too are very laudable on certain points; but it is quite a patent fact that this one hundred years of social reform has produced no permanent and valuable result appreciable throughout the country. Platform speeches have been sent out by the thousand, denunciations have been hurled upon the devoted head of the Hindu race and its civilisation in volumes after volumes, and yet no good practical result has been achieved; and where is the reason for that? The reason is not hard to find. It is in the denunciation itself. In the first place, as I told you before, we must try to keep our historically acquired character as a
people; I grant that we have to take great many things from other nations, that we have to learn many lessons from outside; but I am sorry to say that most of our modern reform-movements have been inconsiderate imitations of Western means and methods of work, and that surely will not do for India; therefore, it is that all our recent reform-movements have had no result. In the second place, denunciation is not at all the way to do good. That there are evils in our society even the child can see, and what society is there where there are no evils? And let me take this opportunity, my countrymen, of telling you that, in comparing the different races and nations of the world I have been among, I have come to the conclusion that our people are, on the whole, the most moral and the most highly godly, and our institutions are, in their plan and purpose, best suited to make mankind happy. I do not therefore want any reformation. My ideal is growth expansion, development on national lines. As I look back upon the history of my country, I do not find, in the whole world, another country which has done quite so much for the improvement of the human mind. Therefore, I have no words of condemnation for my nation. I tell them "You have done well; only try to do
better." Great things have been done in the past in this land; there is both time and room for greater things to be done. I am sure you know that we cannot stop. If we stop we die. We have either to get forward or to go backward. We have either to progress or to degenerate. Our ancestors did great things in the past, but we have to grow into fuller life and march on even beyond their great achievements. How can we now go back and degenerate ourselves? That cannot be; that must not be; going back will lead us to national decay and death. Therefore, let us go forward and do yet greater things; that is what I have to tell you. I am no preacher of any momentary social reform. I am not trying to remedy evils. I only ask you to go forward and to complete the practical realisation of the scheme of human progress that has been laid out in the most perfect order by our ancestors. I only ask you to work to realise more and more the Vedantic ideal of the solidarity of man and his inborn divine nature. Had I the time I would gladly show you how every bit of what we have now to do was laid out years ago by our ancient law-givers, and how they actually anticipated all the different changes that have taken place and are still to take place in our national institutions. They also were
breakers of caste, but they were not like our modern men. They did not mean by the breaking of caste that all the people in a city should sit down together to a dinner of beefsteak and champagne, nor that all fools and lunatics in the country should marry when, where, and whom they chose, and reduce the country to a lunatic asylum, nor did they believe that the prosperity of a nation is to be gauged by the number of husbands its widows get. I am yet to see such a prosperous nation.

THE IDEAL MAN IS THE BRAHMAN.

The ideal man of our ancestors was the Brahmin. In all our books stands out prominently this ideal of the Brahmin. In Europe there is My Lord the Cardinal who is struggling hard and spending thousands of pounds to prove the nobility of his ancestors, and he will not be satisfied until he has traced his ancestry to some dreadful tyrant, who lived on a hill, and watched the people passing through the streets, and whenever he had the opportunity sprang out on them and robbed them. That was the business of these nobility-bestowing ancestors, and My Lord Cardinal is not satisfied until he can trace his ancestry to one of these. In India, on the other hand, the greatest princes seek to trace their descent to some ancient sage, dressed in a bit of loin-cloth,
living in a forest, eating roots, and studying the Vedas. It is there that the Indian prince goes to trace his ancestry. You are high caste when you can trace your ancestry to a Rishi, and not before that. Our ideal of high birth, therefore, is different from that of others. Our ideal is the Brahmin of spiritual culture and renunciation.

**True Brahminness What?**

By the Brahmin ideal what do I mean? The ideal Brahminness in which worldliness is altogether absent and true wisdom is abundantly present. That is the ideal of the Hindu race. Have you not heard how it is declared that he, the Brahmin, is not amenable to law, that he has no law, that he is not governed by kings, and that his body cannot be hurt? That is perfectly true. Do not understand it in the light which has been thrown upon it by interested and ignorant fools, but understand it in the light of the true and original Vedantic conception. If the Brahmin is he who has killed all selfishness and who lives and works to acquire and to propagate wisdom and the power of love, a country that is inhabited by such Brahmins altogether, by men and women who are spiritual and moral and good, is it strange to think of that country as being above and beyond all law? What police, what
military are necessary to govern them? Why should any one govern them at all? Why should they live under a government? They are good and noble, they are the men of God; these are our ideal Brahmins.

THE IDEAL OF CASTE.

We read that in the Satya-yuga there was only one caste to start with, and that was that of the Brahmin. We read in the Mahabharata that the whole world was in the beginning peopled with Brahmins, and that as they began to degenerate they became divided into different castes, and that when the cycle turns round they will all go back to that Brahminical origin. This cycle is now turning round, and I draw your attention to this fact. Therefore our solution of the caste question is not degrading those who are already high up, is not running amuck through food and drink, is not jumping out of our own limits in order to have more enjoyment; but it comes by every one of us fulfilling the dictates of our Vedantic religion; by our attaining spirituality, and by our becoming the ideal Brahmin. There is a law laid on each one of you here in this land by our ancestors, whether you are Aryans, or non-Aryans, Rishis, or Brahmins, or the very lowest out-castes. The command is the same to you all, and that command is
that you must not stop at all without making progress and that, from the highest man to the lowest Pariah, every one in this country has to try and become the ideal Brahmin. This Vedantic idea is applicable not only here but over the whole world. Such is our ideal of caste, meant for raising all humanity slowly and gently towards the realisation of that great ideal of the spiritual man who is non-resisting, calm, steady, worshipful, pure, and meditative. In that ideal there is God.

WHAT SHALL YOUR WORK BE NOW?

How are these things to be brought about? I must again draw your attention to the fact that cursing and vilifying and abusing do not and cannot produce anything good. They have been tried for years and years, and no valuable result has been obtained. Good results can be produced only through love, through sympathy. It is a great subject, and it requires several lectures to elucidate all the plans that I have in view, and all the ideas that are, in this connection, coming to my mind day after day. I must therefore conclude, only reminding you of this fact, that this ship of our nation, O Hindus, has been usefully plying here for ages. To-day, perhaps, it has sprung a few leaks; to-day, perhaps, it has become a little worn; and if such is the case
it behoves you and I, children of the soil, to try our best to stop these leaks and holes. Let us tell our countrymen of the danger, let them awake, let them mend it. I will cry at the top of my voice from one part to the other of this country to awaken the people to know their situation and their duty therein. Suppose they do not hear me, still I shall not have one word of abuse for them, not one word of curse. Great has been our nation's work in the past, and if we cannot do greater things in the future, let us have this consolation, let us all die and sink together in peace. Be patriots, love the race which has done such great things for us in the past. Aye, the more I compare notes the more I love you, my fellow-countrymen; you are good and pure and gentle; and you have been always tyrannised over; such is the irony of this material world of Maya. Never mind that; the spirit will triumph in the long run. In the meanwhile let us work and let us not abuse our country, let us not curse and abuse the weather-beaten and work-worn institutions of our thrice-holy motherland. Have not one word of condemnation, even for the most superstitious and the most irrational of its institutions, for they also must have served to do us good in the past. Remember always that
there is not in the world one other country whose institutions are really better in their aims and objects than the institutions of this land. I have seen castes in almost every country in the world, but nowhere is their plan and purpose so glorious as here. If caste is thus unavoidable, I would rather have a caste of purity and culture and self-sacrifice than a caste of dollar. Therefore utter no words of condemnation. Close your lips and let your hearts open. Work out the salvation of this land and of the whole world, each of you thinking that the entire burden is on your shoulders. Carry the light and the life of the Vedanta to every door and rouse up the divinity that is hidden within every soul. Then, whatever may be the measure of your success, you shall have this satisfaction, that you have lived, worked, and died for a great cause. In the success of this cause, howsoever brought about, is centred the salvation of humanity here and hereafter.
VEDA AND THE VEDANTA.*
BY THE LATE PROF. MAX MULLER.

To the present day India acknowledges no higher authority in matters of religion, ceremonial, customs, and law than the Veda, and so long as India is India, nothing will extinguish that ancient spirit of Vedantism which is breathed by every Hindu from his earliest youth, and pervades in various forms the prayers even of the idolater, the speculations of the philosopher, and the proverbs of the beggar.

For purely practical reasons therefore,—I mean for the very practical object of knowing something of the secret springs which determine the character, the thoughts and deeds, of the lowest as well as of the highest amongst the people in India,—an acquaintance with their religion, which is founded on the Veda, and with their philosophy, which is founded on the Vedanta, is highly desirable.

It is easy to make light of this, and to ask, as some statesmen have asked, even in Europe,
What has religion, or what has philosophy, to do with politics? In India, in spite of all appearances to the contrary, and notwithstanding the indifference on religious matters so often paraded before the world by the Indians themselves, religion, and philosophy too, are great powers still. Read the account that has lately been published of two native statesmen, the administrators of two first-class states in Saurashtra, Junagadh and Bhavnagar, Gokulaji and Gaurisankara*; and you will see whether the Vedanta is still a moral and a political power in India or not.

But I claim even more for the Vedanta, and I

* Life and Letters of Gokulaji Sampattirdama Zala and his views of the Vedanta, by Mannassukharama Suryarama Tripatki Bombay, 1881.

As a young man Gokulaji, the son of a good family, learnt Persian and Sanskrit. His chief interest in life, in the midst of a most successful political career, was the ‘Vedanta.’ A little insight, we are told, into this knowledge turned his heart to higher objects, promising him freedom from grief, and blessedness, the highest aim of all. This was the turning-point of his inner life. When the celebrated Vedanti anchorite, Rama Bava, visited Junagadh, Gokulaji became his pupil. When another anchorite, Paramahansa Sakkidananda, passed through Junagadh on a pilgrimage to Girnar, Gokulaji was regularly initiated in the secrets of the Vedanta. He soon became highly proficient in it, and through the whole course of his life, whether in power or in disgrace, his belief in the doctrines of the Vedanta supported him, and made him, in the opinion of English statesmen, the model of what a native statesman ought to be.
VEDA AND THE VEDANTA.

recommend its study, not only to the candidates for the Indian Civil Service, but to all true students of philosophy. It will bring before them a view of life, different from all other views of life which are placed before us in the History of Philosophy. You saw how behind all the Devas or gods, the authors of the Upanishads discovered the Atman or Self. Of that Self they predicated three things only, that it is, that it perceives, and that it enjoys eternal bliss. All other predicates were negative: it is not this, it is not that—it is beyond anything that we can conceive or name.

But that Self, that Highest Self, the Paramatman, could be discovered after a severe moral and intellectual discipline only, and those who had not yet discovered it, were allowed to worship lower gods, and to employ more poetical names to satisfy their human wants. Those who knew the other gods to be but names or persons—persona or masks, in the true sense of the word—pratikas, as they call them in Sanskrit—knew also that those who worshipped these names or persons, worshipped in truth the Highest Self, though ignorantly. This is a most characteristic feature in the religious history of India. Even in the Bhagavadgita, a rather popular and exoteric exposition of Vedantic doctrines, the Supreme Lord or Bhagavat himself
is introduced as saying: 'Even those who worship idols, worship me.'

But that was not all. As behind the names of Agni, Indra, and Pragapati, and behind all the mythology of nature, the ancient sages of India had discovered the Atman—let us call it the objective Self—they perceived also behind the veil of the body, behind the senses, behind the mind, and behind our reason (in fact behind the mythology of the soul, which we often call psychology), another Atman, or the subjective Self. That Self, too, was to be discovered by a severe moral and intellectual discipline only, and those who wished to find it, who wished to know, not themselves, but their Self, had to cut far deeper than the senses, or the mind, or the reason, or the ordinary Ego.

* Professor Kunen discovers a similar idea in the words placed in the mouth of Jehovah by the prophet Malachi, i. 14: 'For I am a great King, and my name is feared among the heathen.' 'The reference,' he says, 'is distinctly to the adoration already offered to Yahweh by the people, whenever they serve their own gods with true reverence and honest zeal. Even in Deuteronomy the adoration of these other gods by the nations is represented as a dispensation of Yahweh. Malachi goes a step further, and accepts their worship as a tribute which in reality falls to Yahweh,—to Him, the Only True. Thus the opposition between Yahweh and the other gods, and afterwards between the one true God and the imaginary gods, makes room here for the still higher conception that the adoration of Yahweh is the essence and the truth of all religion.' Hibbert Lectures, p. 181.
All these too were mere Devas, bright apparitions—mere names—yet names meant for something. Much that was most dear, that had seemed for a time their very self, had to be surrendered, before they could find the Self of Selves, the Old Man, the Looker-on a subject independent of all personality, an existence independent of all life.

When that point had been reached, then the highest knowledge began to dawn, the self within (the Pratyagatan) was drawn towards the Highest Self (the Paramatman), it found its true self in the Highest Self, and the oneness of the subjective with the objective Self was recognised as underlying all reality, as the dim dream of religion,—as the pure light of philosophy.

This fundamental idea is worked out with systematic completeness in the Vedanta philosophy, and no one who can appreciate the lessons contained in Berkeley’s philosophy, will read the Upanishads and the Brahma-sutras and their commentaries without feeling a richer and a wiser man.

I admit that it requires patience, discrimination, and a certain amount of self-denial before we can discover the grains of solid gold in the dark mines of Eastern philosophy. It is far easier and far more amusing for shallow critics to point out what is absurd and ridiculous in the
religion and philosophy of the ancient world than for the earnest student to discover truth and wisdom under strange disguises. Some progress, however, has been made, even during the short span of life that we can remember. The Sacred Books of the East are no longer a mere butt for the invectives of missionaries or the sarcasms of philosophers. They have at last been recognised as historical documents, aye, as the most ancient documents in the history of the human mind, and as palæontological records of an evolution that begins to elicit wider and deeper sympathies than the nebular formation of the planet on which we dwell for a season, or the organic development of that chrysalis which we call man.

If you think that I exaggerate, let me read you in conclusion what one of the greatest philosophical critics—and certainly not a man given to admiring the thoughts of others—says of the Vedanta, and more particularly of the Upanishads. Schopenhauer writes:

‘In the whole world there is no study so beneficial and so elevating as that of the Upanishads. It has been the solace of my life—it will be the solace of my death.’

I have thus, tried, so far as it was possible in
one course of lectures, to give you some idea of
ancient India, of its ancient literature, and, more
particularly, of its ancient religion. My object
was, not merely to place names and facts before
you, these you can find in many published books,
but, if possible, to make you see and feel the
general human interests that are involved in that
ancient chapter of the history of the human race.
I wished that the Veda and its religion and
philosophy should not only seem to you curious or
strange, but that you should feel that there was in
them something that concerns ourselves, some-
thing of our own intellectual growth, some re-
collections, as it were, of our own childhood, or
at least of the childhood of our own race. I feel
convinced that, placed as we are here in this life,
we have lessons to learn from the Veda, quite as
important as the lessons we learn at school from
Homer and Virgil, and lessons from the Vedanta
quite as instructive as the systems of Plato or
Spinoza.

I do not mean to say that everybody who
wishes to know how the human race came to
be what it is, how language came to be what it is,
how religion came to be what it is, how manners,
customs, laws, and forms of government came to be
what they are, how we ourselves came to be what we are, must learn Sanskrit, and must study Vedic Sanskrit. But I do believe that not to know what a study of Sanskrit, and particularly a study of the Veda, has already done for illuminating the darkest passages in the history of the human mind, of that mind on which we ourselves are feeding and living, is a misfortune, or, at all events, a loss, just as I should count it a loss to have passed through life without knowing something, however little, of the earth and its geological formation, of the movements of the sun, the moon, and the stars,—and of the thought, or the will, or the law, that governs these movements.
